

Negative Feedback Control of Temperature

To complete this worksheet, select:

Module: Foundations

Activity: Animations

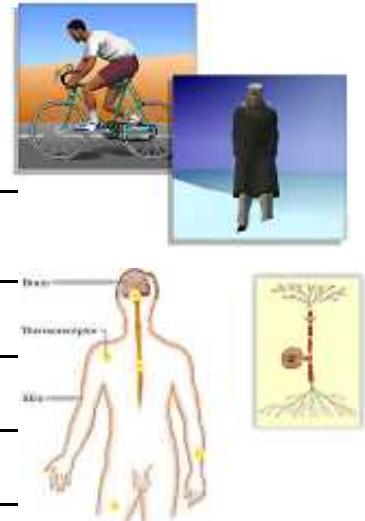

Title: Negative Feedback Control of Temperature

Introduction

1. Describe the importance of homeostatic body temperature maintenance.

2. What is the function, and locations, of thermoreceptors?

3. Explain the negative feedback control of body temperature using thermoreceptors, the hypothalamus, and the temperature control center.

4. How is homeostasis maintained under heat stress? (Include heat-losing center, capillary dilation, and sweat production.)

5. How is homeostasis maintained under cold stress? (include: heat-producing center, capillary constriction, shivering)
