Part I: Creating Desktop Applications 1

Section I: Working with Data Tables and Queries 1

Chapter 1: Understanding Data 3

The Database Terminology of Access 4
 What is a database? 4
 Databases, tables, records, fields, and values 5
Using More Than One Table 7
 Working with multiple tables 8
 Why you should create multiple tables 8
Access Database Objects and Views 9
 Datasheets 9
 Queries and dynasets 10
 Data-entry and display forms 10
 Reports 11
 Designing the system's objects 11
The Seven-Step Design Method 12
 Step 1: The overall design—From concept to reality 13
 Step 2: Report design—Placing your fields 15
 Step 3: Data design—What fields do you have? 17
 Step 4: Table design and relationships 24
 Step 5: Field design data-entry rules and validation 27
 Step 6: Form design—Input 30
 Step 7: Automation design—Menus 32

Chapter 2: Creating and Building Tables 35

Creating Database Tables 35
Creating a Database 35
 Templates Section 37
 Blank database 39
The Database Window 41
 Objects menu bar 42
 Groups menu bar 43
 The Database window toolbar buttons 44
 The Access window toolbar 44

Creating a New Table	46
The table design process	46
The New Table dialog box	47
Creating a new table with a Datasheet View	49
The Table Design Window	51
Using the Table Design window toolbar	52
Working with fields	52
Creating the tblContacts Table	56
AutoNumber fields and Access	56
Completing the tblContacts Table	57
Changing a Table Design	59
Inserting a new field	59
Deleting a field	59
Changing a field location	60
Changing a field name	60
Changing a field size	60
Changing a field data type	61
Understanding Field Properties	62
Entering field-size properties	64
Using formats	65
Entering formats	69
Entering input masks	70
The Input Mask Wizard	72
Entering decimal places	73
Creating a caption	73
Setting a default value	73
Working with validation	73
Understanding the Lookup Property window	76
Determining the Primary Key	76
Creating a unique key	77
Creating the primary key	78
The Indexes window	78
The Table Properties window	79
Printing a Table Design	80
Saving the Completed Table	81
Manipulating Tables in a Database Window	81
Renaming tables	81
Deleting tables	82
Copying tables in a database	82
Copying a table to another database	83
Adding Records to a Database Table	83

Chapter 3: Entering Data into Tables and Forms 85

Understanding Datasheets	85
The Datasheet Window	86
Moving within a datasheet	88
The Navigation buttons	88
The Datasheet toolbar	89

Opening a Datasheet 92

Entering New Data 92

 Saving the record 94

 Understanding automatic data-type validation 95

 Understanding how properties affect data entry 96

Navigating Records in a Datasheet 98

 Moving between records 98

 Finding a specific value 99

Changing Values in a Datasheet 102

 Replacing an existing value manually 102

 Changing an existing value 103

 Fields that you can't edit 104

Using the Undo Feature 104

Copying and Pasting Values 105

Replacing Values 105

Adding New Records 106

Deleting Records 107

Adding, Changing, and Deleting Columns 107

 Deleting a column from a datasheet 108

 Adding a column to a datasheet 108

 Changing a field name (column header) 108

Displaying Records 108

 Changing the field order 108

 Changing the field display width 110

 Changing the record display height 111

 Displaying cell gridlines 112

 Changing display fonts 113

 Hiding and unhiding columns 114

 Freezing columns 115

 Saving the changed layout 115

 Saving a record 115

Sorting and Filtering Records in a Datasheet 115

 Using the QuickSort feature 116

 Using Filter By Selection 116

 Using Filter By Form 118

Printing Records 118

 Printing the datasheet 119

 Using the Print Preview window 119

Chapter 4: Creating and Understanding Relationships 123

Tables Used in the Access Auto Auctions Database 123

Understanding Keys 126

 Deciding on a primary key 128

 Benefits of a primary key 129

 Creating a primary key 130

 Understanding foreign keys 132

Understanding Relations between Tables 132

 A review of relationships 133

 Understanding the four types of table relationships 133

Understanding Referential Integrity	136
Creating Relationships	136
Using the Relationships window	137
Creating relationships between tables	139
Specifying relationship options in the Edit Relationships dialog box	140
Finishing the relationships between the tables of the Access Auto Auctions system	144
Saving the relationships between tables	146
Adding another relationship	146
Deleting an existing relationship	147
Join lines in the Relationships window	147
Printing a report of the relationships	147
Using Subdatasheets	148
Setting up sub-datasheets	149

Chapter 5: Displaying Selected Data with Queries 153

Understanding Queries	153
What is a query?	154
Types of queries	156
Query capabilities	157
How dynasets work	158
Creating a Query	158
Selecting a table	159
Using the Query window	161
Navigating the Query Design window	161
Using the Query Design toolbar	162
Using the QBE pane of the Query Design window	163
Selecting Fields	163
Adding a single field	163
Adding multiple fields	165
Adding all table fields	166
Displaying the Dynaset	167
Working with the datasheet	168
Changing data in the query datasheet	168
Returning to the query design	168
Working with Fields	168
Selecting a field	168
Changing field order	170
Resizing columns in design mode	170
Removing a field	171
Inserting a field	171
Changing the field display name	171
Showing table names	172
Showing a field	173
Changing the Sort Order	173
Specifying a sort	174

Displaying Only Selected Records	175
Understanding record criteria	175
Entering simple character criteria	176
Entering other simple criteria	177
Printing a Query Dynaset	178
Saving a Query	179
Adding More than One Table to a Query	180
Working with the Table/Query Pane	181
The join line	181
Resizing the Table/Query pane	182
Manipulating the Field List window	184
Moving a table	184
Removing a table	184
Adding more tables	185
Resizing a Field List window	185
Adding Fields from More than One Table	185
Adding a single field	185
Viewing the table names	186
Adding multiple fields at the same time	186
Adding all table fields	187
Understanding the Limitations of Multiple-Table Queries	188
Updating limitations	188
Overcoming query limitations	190
Creating and Working with Query Joins	191
Joining tables	192
Specify the type of join	193
Deleting joins	194
Understanding Types of Table Joins	195
Inner joins (Equi-joins)	195
Changing join properties	196
Inner and outer joins	198
Creating a Cartesian product	201

**Chapter 6: Using Operators and Expressions
in Multi-table Select Queries 203**

What Are Operators?	203
Types of operators	204
When are operators used?	204
Mathematical operators	204
Relational operators	208
String operators	210
Boolean (logical) operators	213
Miscellaneous operators	216
Operator precedence	217
Moving beyond Simple Queries	219
Using query comparison operators	220
Understanding complex criteria selection	222
Using functions in select queries	225
Referencing fields in select queries	226

Entering Single-Value Field Criteria	226
Entering character (Text or Memo) criteria	227
The Like operator and wildcards	228
Specifying non-matching values	232
Entering numeric (Number, Currency, or Counter) criteria	233
Entering Yes/No (logic) criteria	234
Entering a criterion for an OLE object	235
Entering Multiple Criteria in One Field	235
Understanding an Or operation	236
Specifying multiple values for a field using the Or operator	236
Using the Or: cell of the QBE pane	237
Using a list of values with the In operator	238
Understanding an And query	238
Specifying a range using the And operator	239
Using the Between...And operator	239
Searching for Null data	240
Entering Criteria in Multiple Fields	241
Using And and Or across fields in a query	241
Specifying And criteria across fields of a query	242
Specifying Or criteria across fields of a query	243
Using And and Or together in different fields	244
A complex query on different lines	245
Creating a New Calculated Field in a Query	246
Chapter 7: Working with External Data	247
Access and External Data	247
Types of external data	248
Methods of working with external data	248
Should you link to or import data?	249
Linking External Data	252
Types of database management systems	252
Linking to other Access database tables	255
Linking to dBASE databases (tables)	257
Linking to Paradox tables	259
Linking to non-database tables	261
Splitting an Access database into two linked databases	267
Working with Linked Tables	269
Setting view properties	270
Setting relationships	270
Setting links between external tables	271
Using external tables in queries	271
Renaming tables	273
Optimizing linked tables	273
Deleting a linked table reference	274
Viewing or changing information for linked tables	274
Importing External Data	275
Importing other Access objects	276
Importing non-Access PC-based database tables	277
Importing spreadsheet data	279

Importing from word-processing files	282
Importing text file data	282
Importing HTML tables	293
Modifying imported table elements	293
Troubleshooting import errors	294
Exporting to External Formats	295
Exporting objects to other Access databases	296
Exporting objects to other external databases or to Excel, HTML, or text files	296

Part I: Creating Desktop Applications 299

Section II: Building Forms and Reports 299

Chapter 8: Understanding the Many Uses of Forms and Controls. . . 301

Understanding Forms	301
What are the basic types of forms?	302
How do forms differ from datasheets?	305
Creating a form with AutoForm	306
Understanding Form Controls	309
What Is a Control?	309
The different control types	310
Standards for Using Controls	312
Label controls	313
Text box controls	314
Toggle buttons, option buttons, and check boxes	314
Option groups	316
List boxes	317
Combo boxes	318
Tab controls	318

Chapter 9: Building and Manipulating Forms and Controls 321

Creating a Form with Form Wizards	321
Creating a new form	321
Selecting the New Form type and data source	322
Choosing the fields	323
Choosing the form layout	324
Choosing the style of the form	325
Creating a form title	326
Completing the form	327
Changing the Design	327
Using the Form Window	329
The Form toolbar	329
Navigating between fields	329
Moving between records in a form	330

Displaying Your Data with a Form	331
Working with pictures and OLE objects	331
Memo field data entry	332
Switching to a datasheet	332
Saving a Record and the Form	333
Printing a Form	333
Using the Print Preview window	334
Creating New Controls	335
Resizing the form area	336
The two ways to add a control	336
Dragging a field name from the Field List window	337
Creating unbound controls with the toolbox	338
Selecting Controls	340
Deselecting selected controls	341
Selecting a single control	341
Selecting multiple controls	341
Manipulating Controls	342
Resizing a control	342
Moving a control	343
Aligning controls	344
Sizing controls	345
Grouping controls	346
Deleting a control	347
Attaching a label to a control	347
Copying a control	348

Chapter 10: Creating Bound Forms and Placing Controls 349

Creating a Data-Entry Form without a Wizard	349
Creating a new blank form	350
Resizing the form's workspace	350
Understanding the design windows	353
Creating a bound form	355
Saving the form	356
Working with control properties	357
Working with form properties	362
Placing Bound Fields on a Form	372
Displaying the field list	373
Selecting the fields for your form	373
Adding a Form Header or Footer	375
Working with Label Controls and Text Box Controls	376
Creating unattached labels	376
Modifying the text in a label or text control	377
Modifying the format of text in a control	378
Sizing a text box control or label control	379
Deleting a control	381
Moving label and text controls	381
Modifying the appearance of multiple controls	382
Changing the control type	383

Setting the Tab Order	384
Using Multiple-Line Text Box Controls for Memo Fields	386
Working with Bound Object Frames on a Form	387
Creating a Calculated Field	387
Fixing a Picture's Display	388
Printing a Form	389
Converting a Form to a Report	390

Chapter 11: Adding Data-Validation Features to Forms 391

Creating Data-Validation Expressions	392
Creating status line messages	393
Entering table level validation expressions	394
Entering validation expressions	394
Creating Choices with Option Groups and Buttons	395
Creating option groups	397
Creating Yes/No Options	403
Creating check boxes	403
Creating Visual Selections with Toggle Buttons	405
Adding a bitmapped image to the toggle button	405
Working with List Boxes and Combo Boxes	406
The differences between list boxes and combo boxes	406
Settling real-estate issues	407
Creating and Using Combo Boxes	407
Creating a single-column combo box	408
Understanding combo box properties	411
Creating a multiple-column combo box	412

Chapter 12: Creating Professional-Looking Forms and Reports . . . 421

Making a Good Form Look Great	421
Understanding visual design	422
Using the formatting windows and toolbar	423
Creating special effects	425
Changing the forms background color	427
Enhancing Text-Based Controls	427
Enhancing label and text box controls	427
Creating a text shadow	428
Changing text to a reverse video display and coloring it	429
Displaying label or text box control properties	430
Displaying Images in Forms	433
Working with Lines and Rectangles	436
Emphasizing Areas of the Form	437
Adding a shadow to a control	438
Raising a group of controls	438
Changing the header dividing line	439
Adding a Background Bitmap	439
Using AutoFormat	440
Customizing and adding new AutoFormats	441
Copying individual formats between controls	442

Chapter 13: Understanding and Creating Reports 443

Understanding Reports	443
What types of reports can you create?	443
The difference between reports and forms	446
The process of creating a report	447
Creating a Report with Report Wizards	448
Creating a new report	449
Choosing the data source	450
Choosing the fields	450
Selecting the grouping levels	451
Defining the group data	452
Selecting the sort order	453
Selecting summary options	453
Selecting the layout	454
Choosing the style	454
Opening the report design	455
Using the Print Preview window	456
Viewing the Report Design window	457
Printing a Report	458
Saving the Report	458
Starting with a Blank Form	459
The Design Window toolbar	460
Banded Report Writer Concepts	461
How sections process data	462
The Report Writer sections	464
Creating a New Report	467
Creating a new report and binding it to a query	468
Defining the report page size and layout	469
Placing fields on the report	472
Resizing a section	474
Working with unattached label controls and text	475
Working with text boxes and their attached label controls	477
Changing label and text box control properties	484
Growing and shrinking text box controls	486
Sorting and grouping data	487
Adding page breaks	493
Making the Report Presentation Quality	494
Adjusting the Page Header	495
Creating an expression in the Group Header	497
Changing the picture properties and the Detail section	497
Creating a standard page footer	498
Saving your report	500

Chapter 14: Working with Subforms 503

What Is a Subform?	503
Understand the data for the sales example	505

Creating Subforms with the Form Wizard	507
Creating the form and selecting the Form Wizard	508
Choosing the fields for the main form	508
Selecting the table or query that will be the subform	508
Choosing the fields for the subform	510
Selecting the form data layout	510
Selecting the subform layout	511
Selecting the form style	512
Selecting the form title	512
Displaying the form	512
Displaying the main form design	514
Linking a form and subform	515
Displaying the subform design	516
Creating the Sales Invoice Form	517
Creating a combo box that retrieves data	518
Displaying data from another table in a form	520
Creating a Subform Without Wizards	524
Working with Continuous Form subforms	525
Adding the subform to the main form	531
Linking the form and subform	533
Referencing controls in subforms	534
Creating a simple calculated control	537

Chapter 15: Creating Calculations and Summaries in Reports 539

Designing a Full-Page Report with Embedded Subforms and Totals	539
Designing and creating the query for the report	540
Designing test data	541
Examining the Invoice report design	543
Adding an unbound picture to the report	545
Adding the Payments subform	547
Creating a subreport reference to a summary control	550
Creating a Multilevel Grouping Report with Totals	552
Creating a total query	553
Creating a query that uses a query	557
Creating a new columnar report	558
Changing the report design	563
Changing the report margins and page setup	570
Calculating percentages using totals	571
Calculating running sums	572
Creating a title page in a report header	573

Chapter 16: Presenting Data with Special Report Types. 575

Creating Mailing Labels Using the Label Wizard	575
Selecting the label size	576
Selecting the font and color	578
Creating the mailing label text and fields	578
Sorting the mailing labels	580

Displaying the labels in the Print Preview window	580
Modifying the label design in the Report Design window	582
Printing labels	584
Creating Snaked-Column Reports	585
Creating the report	586
Defining the page setup	587
Printing the snaked-column report	588
Creating Mail Merge Reports	589
Assembling data for a mail merge report	589
Creating a mail merge report	592
Creating the page header area	592
Working with embedded fields in text	594
Printing the mail merge report	597
Using the Access Mail Merge Wizard for Microsoft Word	597

Chapter 17: Using OLE Objects, Graphs, Pivot Tables/ Charts, and ActiveX Controls 603

Understanding Objects	603
Types of objects	604
Using bound and unbound objects	604
Linking and embedding	605
Embedding Objects	607
Embedding an unbound object	607
Embedding bound objects	611
Adding a bound OLE object	612
Adding a picture to a bound object frame	613
Editing an embedded object	613
Linking Objects	614
Linking a bound object	615
Creating a Graph or Chart	617
The different ways to create a graph	617
Customizing the Toolbox	618
Embedding a Graph in a Form	618
Assembling the data	619
Adding the graph to the form	619
Customizing a Graph	626
Understanding the Graph window	627
Working with attached text	628
Changing the graph type	631
Changing axis labels	633
Changing a bar color, pattern, and shape	633
Modifying gridlines	634
Manipulating three-dimensional graphs	635
Integration with Microsoft Office	638
Checking the spelling of one or more fields and records	638
Correcting your typing automatically when entering data	639
Using OLE automation with Office 2003	640
Creating an Excel type PivotTable	640

Creating a PivotChart	646
Using the Calendar ActiveX Control	649

Part I: Creating Desktop Applications 653

Section III: Automating Your Applications 653

Chapter 18: Understanding Visual Basic and the VBA Editor 655

Migrating from Macros to Visual Basic	655
When to use macros and when to use Visual Basic procedures	656
Converting existing macros to Visual Basic	657
Using the Command Button Wizard to create Visual Basic code	660
Creating Programs in Visual Basic for Applications	662
Understanding events and event procedures	663
Understanding modules	665
Creating a new module	667

Chapter 19: Introduction to Programming and Events 679

Programming Events	679
How do events trigger actions?	680
Where to trigger event procedures	681
Form Event Procedures	681
Control Event Procedures	685
Opening a form with an event procedure	686
Running an event procedure when closing a form	688
Using an event procedure to confirm a delete	689
Report Event Procedures	693
Running an event procedure when a report opens	694
Report Section Event Procedures	695
Using On Format	695
Using Variables	697
Naming variables	697
Declaring variables	698
Working with Data Types	700
Understanding Visual Basic Logical Constructs	703
Conditional processing	703
Repetitive looping	707

Chapter 20: Working with Expressions and Functions 713

What Are Expressions?	713
The parts of an expression	715
Creating an expression	716
Special identifier operators and expressions	718
Special keywords and properties	721

What Are Functions?	722
Using functions in Access	722
Types of functions	723
Chapter 21: Working with SQL, Recordsets, and ADO	737
Understanding SQL	737
Viewing SQL statements in queries	738
An SQL primer	738
Creating Programs to Update a Table	744
Updating fields in a record using ADO	745
Updating a calculated field for a record	748
Adding a new record	752
Deleting a record	753
Deleting related records in multiple tables	753
Chapter 22: Automating, Searches, Filters, and Query Parameters	757
Adding an Unbound Combo Box to Select One or More Records	757
Using the FindRecord Command to Locate a Record	760
Using the Bookmark to Locate a Record	762
Filtering a Form Using Code	764
Using a Query to Filter a Form Interactively	766
Creating a parameter query	766
Creating an interactive dialog box	767
Linking the dialog box to another form	769
Chapter 23: Calling Subprocedures and Functions	771
Understanding the Difference Between a Subprocedure and a Function	771
Understanding where to create a procedure	772
Calling procedures and functions	772
Creating a procedure	773
Creating Functions	775
Handling passed parameters	777
Calling a function and passing parameters	778
Creating a Function to Calculate Taxes	780
Chapter 24: Effective Debugging and Error Handling in VBA	783
Testing and Debugging Your Applications	784
VBA Assistance: Auto Quick Info and Auto List Members	785
Syntax checking — The first step	786
Compiling Procedures	787
Handling Runtime Errors	789
Using the Immediate, Locals, and Watches Windows	791
Creating a Breakpoint	792

Errors	795
Types of errors	795
The elements of error handling	796
VBA error statements	796
Logging Errors	802

Chapter 25: Creating Switchboards, Command Bars, Menus, Toolbars, and Dialog Boxes 805

Switchboards and Command Buttons	806
Using a switchboard	807
Creating the basic form for a switchboard	807
Working with command buttons	809
Creating command buttons	811
Linking a command button to a macro	818
Adding a picture to a command button	824
Working with the Switchboard Manager	826
Creating the Report Switchboard	827
Creating Custom Menu Bars, Toolbars, and Shortcut Menus	835
Understanding command bars	836
Creating custom menu bars with command bars	837
Changing existing menus and toolbars	838
Creating a new menu bar	838
Attaching the menu bar to a form	846
Creating shortcut menus	847
Creating and using custom toolbars	851
Attaching the toolbar to a form	853
Adding control tips to any form control	855
Starting the switchboard automatically when you open the database	855
Creating a Print Report Dialog Box Form in Visual Basic	857
Creating a form for printing products	857
Creating the option group	859
Creating two text boxes on the print report form	859
Creating command buttons	860
Creating the Print event procedures	861

Chapter 26: Programming Continuous Forms, Tab Dialogs, and Command Buttons 865

Working with Tab Controls	866
Creating a tab control	867
Changing the tab control page properties	870
Copying controls from a Detail section to a tab control page	871
Programming Continuous Forms	872
Embedding a subform in a tab control	873
Creating code to delete a record from a continuous form	876
Creating code to reposition the record pointer between tabs	878
Creating code to sort data columns using labels	879
Common Code for Common Functions	880

Part II: Creating Enterprise Applications 883

Section IV: Upsizing to SQL Server and MSDE 2000 883

Chapter 27: Upsizing Data to a SQL Server Database 885

Understanding MSDE 2000	885
Comparing MSDE 2000 and Jet	886
Choosing the right database engine	886
Installing MSDE 2000	889
Hardware requirements	889
Software requirements	889
Running the SQL Server 2000 Desktop Engine Installation Program	889
Customizing the installation of SQL Server 2000 Desktop Engine	891
Starting the SQL Server 2000 Desktop Engine	892
Using the Upsizing Wizard	893
Before upsizing an application	894
Starting the Upsizing Wizard	895

Chapter 28: Working with Access Projects 903

Upsizing to an Access Project	904
Starting the Upsizing Wizard	904
Using the Upsizing Wizard to create a Client/Server Application . . .	906
Using Unbound Forms	910
Working with unbound forms	911
Creating an unbound form	912
Displaying data on the form	913
Updating data	916
Finding a record	919

**Chapter 29: Working with Access Projects and SQL Server
 Tables and Queries 921**

Determining a Project's Database Name	922
Working with Tables	923
Working with fields in the Table Design window	923
The Table Properties window	925
Understanding Project Queries	933
Creating views	933
Creating stored procedures	935
Creating user-defined functions	938
Using triggers to automatically update data	942

Part III: Creating Web Applications 945

Section V: Creating Data Access Pages and Using XML and InfoPath 945

Chapter 30: Using and Creating Access Objects for Intranets and the Internet	947
Types of Web Pages That Access Can Create	948
Data access pages	948
Working with dynamic and static views of Web-based data	950
Exporting Tables, Queries, Forms, and Reports to Web Pages	954
Exporting an Access table to static HTML format	954
Exporting an Access query datasheet to static HTML format	956
Exporting an Access form datasheet to static HTML format	958
Changing Page Setup properties for datasheets	961
Exporting a datasheet to dynamic HTML format	961
Exporting a form to dynamic HTML format	963
Processing ASP files on the Web server	964
Exporting a report to static HTML format	966
HTML template files	968
Importing and Linking (Read-Only) HTML Tables and Lists	971
Importing an HTML table	972
Linking to an HTML table	974
Using Hyperlinks to Connect Your Application to the Internet	974
Using the Hyperlink data type	975
Adding a hyperlink to a form, report, or datasheet	976
Creating a label using the Insert Hyperlink button	978
Chapter 31: Building and Working with Data Access Pages	981
Working with the Data Access Pages	982
What is a data access page?	982
Creating a single table data access page	985
Working with multiple tables and grouped pages	996
Changing some key properties on data access pages	1014
Saving other Access objects as data access pages	1025
Chapter 32: XML, Access, and InfoPath	1037
XML Data and Access	1037
Understanding XML	1038
What is XML?	1040
What are XML schemas?	1041
Using XSL to display XML data	1041
Using XSLT with XML data	1042

- Creating Your Own XML Documents 1043
 - The process of creating a simple XML document 1043
 - Deciding on the tags for an XML document 1044
 - Deciding on the data for an XML document 1045
 - Putting the tags and data together 1046
 - Creating a multi-table XML document 1048
- Displaying XML Documents in Internet Explorer 1050
- Exporting to XML 1052
 - Exporting a table or query to XML 1053
 - Exporting linked tables 1055
 - Exporting a form to XML 1055
 - Exporting a report to XML 1058
- Importing XML Data 1059
 - Importing simple, single table XML data 1059
 - Importing a single table with OLE Object
 - from an XML document 1061
 - Importing multi-table XML data 1061
- InfoPath and Access 1062
 - Quick overview of InfoPath 1063
 - Creating an XML-Based InfoPath form 1065
 - Creating an InfoPath form attached to a database 1070
 - Working with an InfoPath form 1075
 - Importing an InfoPath XML document into Access 1078

Part IV: Advanced Access Database Topics 1081

Chapter 33: Exchanging Data with Office Applications 1083

- Using Automation to Integrate with Office 1084
 - Creating Automation references 1084
 - Creating an instance of an Automation object 1087
 - Getting an existing object instance 1088
 - Working with Automation objects 1090
 - Closing an instance of an Automation object 1090
- An Automation Example Using Word 1091
 - Creating an instance of a Word object 1095
 - Making the instance of Word visible 1095
 - Creating a new document based on an existing template 1096
 - Using Bookmarks to insert data 1096
 - Activating the instance of Word 1096
 - Moving the cursor in Word 1097
 - Closing the instance of the Word object 1097
 - Inserting pictures by using Bookmarks 1097
 - Using Office's Macro Recorder 1098

Chapter 34: Adding Security to Applications	1101
Understanding Jet Security	1101
Understanding workgroup files	1102
Understanding permissions	1102
Understanding security limitations	1103
Choosing a Security Level to Implement	1104
Creating a Database Password	1104
Using the /runtime Option	1107
Using a Database's Startup Options	1110
Using the Jet User-Level Security Model	1111
Enabling security	1111
Working with workgroups	1112
Working with users	1115
Working with groups	1119
Securing objects by using permissions	1123
Using the Access Security Wizard	1129
Encrypting a Database	1136
Decrypting a Database	1137
Protecting Visual Basic Code	1137
Preventing Virus Infections	1139
Enabling sandbox mode	1139
Chapter 35: Creating Help Systems	1143
Understanding the Windows Help Structure	1143
The Help Viewer	1144
The Contents tab	1145
The Topic pane	1146
Creating a Windows Help System	1147
Creating Help topics	1148
Creating a Help project file	1149
Creating a table of contents	1158
Creating a Help Index	1162
Integrating a Help File with Your Application	1167
Displaying form-level Help	1167
Displaying control-level Help	1168
Mapping a Help Context ID to a Help topic	1169
Testing the HTMLHelp API	1172
Testing Help in Access	1173
Displaying the Table of Contents	1174
Chapter 36: Working with Advanced Select Queries and Other Query Topics	1179
Using Calculated Fields	1180
Calculated fields and the Expression Builder	1182
Creating complex calculated fields	1185
Finding the Number of Records in a Table or Query	1187
Finding the Top (n) Records in a Query	1189

- How Queries Save Field Selections 1191
 - Hiding (not showing) fields 1191
 - Renaming fields in queries 1192
 - Hiding and unhiding columns in the QBE pane 1193
- Query Design Options 1195
- Setting Query Properties 1197
- Creating Queries That Calculate Totals 1199
 - Showing and hiding the Total: row in the QBE pane 1200
 - The Total: row options 1201
 - Performing totals on all records 1205
 - Performing totals on groups of records 1206
 - Specifying criteria for a total query 1210
 - Creating expressions for totals 1213
- Creating Crosstab Queries 1216
 - Understanding the crosstab query 1216
 - Creating the crosstab query 1217
 - Entering multiple-field row headings 1219
 - Specifying criteria for a crosstab query 1221
 - Specifying fixed column headings 1224
 - The Crosstab Query Wizard 1226

Chapter 37: Working with Action and SQL Queries 1229

- About Action Queries 1229
 - Types of action queries 1230
 - Uses of action queries 1230
 - The process of action queries 1231
 - Viewing the results of an action query 1231
 - Reversing action queries 1232
- Creating Action Queries 1233
 - Creating an update action query to change values 1233
 - Creating a new table using a make-table query 1238
 - Creating queries to append records 1242
 - Creating a query to delete records 1250
 - Creating other queries using the Query Wizards 1255
 - Saving an action query 1258
 - Running an action query 1258
- Troubleshooting Action Queries 1259
 - Data-type errors in appending and updating 1259
 - Key violations in action queries 1259
 - Record-locked fields in multi-user environments 1259
 - Text fields 1259
- SQL-Specific Queries 1260
 - Creating union queries 1260
 - Creating pass-through queries 1261
 - Creating data definition queries 1262
 - Creating SQL subqueries in an Access query 1263

Chapter 38: Increasing the Speed of an Application 1265

Understanding Module Load on Demand	1265
Organizing your modules	1266
Access 2003 prunes the call tree	1266
Using the Access 2002-2003 Database File Format	1268
Distributing .MDE Files	1270
Understanding the Compiled State	1272
Putting your application's code into a compiled state	1273
Losing the compiled state	1274
Distributing applications in a compiled or uncompiled state	1275
Improving Absolute Speed	1279
Tuning your system	1281
Getting the most from your tables	1281
Getting the most from your queries	1284
Getting the most from your forms and reports	1285
Getting the most from your modules	1288
Increasing Network Performance	1293
Improving Perceived Speed	1293
Using a splash screen	1293
Loading and keeping forms hidden	1294
Using the hourglass	1295
Using the built-in progress meter	1295
Creating a progress meter with a pop-up form	1297
Speeding up the progress meter display	1299
Working with Large Program Databases in Access 2003	1300
How databases grow in size	1300
Simply compiling and compacting may not be enough	1301
Rebooting gives you a clean memory map	1302
Repair does nothing if the database is not corrupt	1302
You can fix a single corrupt form by removing the record source	1302
Create a new database and import all of the objects	1302
The decompile option in Access 2003	1303
Summary — six steps to large database success	1304
An interface for detecting an uncompiled database and automatically recompiling	1305
Making small changes to large databases — export	1307

Chapter 39: Preparing Your Application for Distribution 1309

Defining the Startup Parameters of the Application	1310
Application Title	1310
Application Icon	1310
Menu Bar	1311
Allow Full Menus	1311
Allow Default Shortcut Menus	1311
Display Form/Page	1311
Display Database Window	1311

- Display Status Bar 1311
- Shortcut Menu Bar 1312
- Allow Built-in Toolbars 1312
- Allow Toolbar/Menu Changes 1312
- Use Access Special Keys 1312
- Testing the application before distribution 1313
- Polishing Your Application 1314
 - Giving your application a consistent look and feel 1314
 - Adding common professional components 1316
 - Creating comprehensive and intuitive menus and toolbars 1319
- Bulletproofing an Application 1319
 - Using error trapping on all Visual Basic procedures 1319
 - Separating the code objects from the tables in the application 1320
 - Documenting the application 1320
 - Creating a help system 1321
 - Implementing a security structure 1321
- The Access 2003 Developer Extensions 1321
 - Using the Package Wizard 1322
 - Working with the Property Scanner Add-In 1330

Part V: Appendixes and Reference Material 1331

- Appendix A: Access 2003 Specifications 1333**
- Appendix B: Access Auto Auction Tables 1339**
- Appendix C: Using the CD-ROM Included with the Book 1345**
- Appendix D: Using Standard Naming Conventions 1355**
- Index. 1363
