DESCRIPTION

Knowledge Translation in Health Care is a practical introduction to knowledge translation for everyone working and learning within health policy and funding agencies, and as researchers, clinicians and trainees. Using everyday examples, it explains how to use research findings to improve health care in real life.

This new second edition defines the principles and practice of knowledge translation and outlines strategies for successful knowledge translation in practice and policy making. It includes relevant real world examples and cases of knowledge translation in action that are accessible and relevant for all stakeholders including clinicians, health policy makers, administrators, managers, researchers, clinicians and trainees.

From an international expert editor and contributor team, and fully revised to reflect current practice and latest developments within the field, Knowledge Translation in Health Care is the practical guide for all health policy makers and researchers, clinicians, trainee clinicians, medical students and other healthcare professionals seeking to improve healthcare practice.
