DESCRIPTION

The latest edition of the gold standard in construction project management references

In the newly revised sixth edition of Code of Practice for Project Management for the Built Environment, the Chartered Institute of Building delivers an up-to-date and comprehensive reference to the principles and practice of project management in construction and development. This latest edition covers the new technologies, internationalisation, changing legislation, and productivity and profitability challenges faced by all project stakeholders that are driving significant change in the industry.

The book demonstrates the application of systematic documentation and quality control to complex construction projects and offers checklists, and documentation that link key principles to practical project management. It is worldwide in scope and widely recognised as the industry standard on the subject.

With fresh discussions of quality assurance, codes and standards, time management, joint ventures, contract compliance, supply chain integration, design digitisation, and much more, the Code of Practice for Project Management for the Built Environment also includes:

• A thorough introduction to the ways in which the needs and benefits of the project are identified, from assessing feasibility and defining strategies, to establishing design specifications

• Comprehensive explorations of how manufacturing and construction is implemented and validated with handover and management of the asset in operation
• Further analysis of how a project might be retired, repurposed or demolished

• Practical discussions of post-completion review

• A complete glossary and index of essential terms in construction project management

Perfect for project management professionals in construction contracting and client organisations, *Code of Practice for Project Management for the Built Environment* will also earn a place in the libraries of undergraduate and postgraduate students of project management and construction-related subjects.
