DESCRIPTION

This book presents the latest developments in the field of biomedical photonics with emphases on novel technologies, including optical microscopy, optical coherence tomography, fluorescence imaging-guided surgery, photodynamic therapy dosimetry and optical theranostic technologies. Application examples of the technologies are also introduced, such as cancer therapy and drug delivery.

ABOUT THE AUTHOR

Zhenxi Zhang is Professor in the School of Life Science and Technology at Xi’an Jiaotong University, China. After his PhD from University of Science and Technology of China, he joined Xi’an Jiaotong University. His research interests include biomedical photonics imaging and spectral analysis techniques. He has published more than 200 scientific papers. He received two times the provincial and ministerial level scientific and technological progress awards and the Outstanding Teacher Award of Baogang Education Foundation.

Jiang Shudong is Associate Professor in the Thayer School of Engineering at Dartmouth College, USA. She received her PhD in optoelectronics from Tokyo Institute of Technology, Japan. Her research interests include optical spectroscopy and imaging systems for biomedical applications. She has published more than 70 journal articles.
