Retrofitting Suburbia: Urban Design Solutions for Redesigning Suburbs
Ellen Dunham-Jones, June Williamson

Paperback ISBN: 978-0-470-93432-6 March 2011 $52.00

DESCRIPTION

Updated with a new Introduction by the authors and a foreword by Richard Florida, this book is a comprehensive guide book for urban designers, planners, architects, developers, environmentalists, and community leaders that illustrates how existing suburban developments can be redesigned into more urban and more sustainable places. While there has been considerable attention by practitioners and academics to development in urban cores and new neighborhoods on the periphery of cities, there has been little attention to the redesign and redevelopment of existing suburbs. The authors, both architects and noted experts on the subject, show how development in existing suburbs can absorb new growth and evolve in relation to changed demographic, technological, and economic conditions.

Retrofitting Suburbia was named winner in the Architecture & Urban Planning category of the 2009 American Publishers Awards for Professional and Scholarly Excellence (The PROSE Awards) awarded by The Professional and Scholarly Publishing (PSP) Division of the Association of American Publishers

ABOUT THE AUTHOR

Ellen Dunham-Jones, AIA, is associate professor and director of the architecture program at the Georgia Institute of Technology. An award-winning architect, she has published extensively on urban design and criticism. She has taught at University of Virginia, MIT, and Lund University in Sweden and has been honored by DesignIntelligence, ACSA, and AIA for bridging theory and practice.
She serves on several boards including the board of directors of the Congress for the New Urbanism and the editorial board of the journal *Places*.

**June Williamson**, RA, LEED-AP is associate professor of architecture at The City College of New York /CUNY. An urban designer and registered architect, she has authored design guidelines and consulted on numerous urban planning projects throughout the United States. She has been a visiting professor at Columbia University, Georgia Institute of Technology, University of Utah, and Boston Architectural College. An accomplished researcher and author, she has written articles for the journal *Places* and other publications.

---

**FEATURES**

With hands-on lessons for architects and planners, this guide to redesigning suburbs provides those interested in sustainability and smart growth with alternatives to the norms of sprawl. The book:

- Documents innovative case studies of prototypical American suburban developments (malls, commercial strips, office parks, cul-de-sac subdivisions) that have been retrofitted to new uses and forms.

- Provides examples of how a dead mall can be transformed into a thriving mall and office park with transit-oriented downtown, how malls can incorporate housing and other mixed uses, and how a failed mall can be converted to wetland or public park.

- Covers retrofits of office and industrial parks, residential subdivisions, and suburban apartment complexes.
