The Primate Origins of Human Nature
Carel P. Van Schaik

DESCRIPTION

The Primate Origins of Human Nature (Volume 3 in The Foundations of Human Biology series) blends several elements from evolutionary biology as applied to primate behavioral ecology and primate psychology, classical physical anthropology and evolutionary psychology of humans. However, unlike similar books, it strives to define the human species relative to our living and extinct relatives, and thus highlights uniquely derived human features. The book features a truly multi-disciplinary, multi-theory, and comparative species approach to subjects not usually presented in textbooks focused on humans, such as the evolution of culture, life history, parenting, and social organization.

ABOUT THE AUTHOR

Carel P. van Schaik, PhD, is one of the most eminent and best recognized teachers and academics in the world working in the areas of human and primate evolution and anthropology. He is Professor of Anthropology at the Anthropological Institute and Museum of the University of Zürich, Switzerland.
