Adaptive filtering is a topic of immense practical and theoretical value, having applications in areas ranging from digital and wireless communications to biomedical systems. This book enables readers to gain a gradual and solid introduction to the subject, its applications to a variety of topical problems, existing limitations, and extensions of current theories. The book consists of eleven parts, each part containing a series of focused lectures and ending with bibliographic comments, problems, and computer projects with MATLAB solutions.

About the Author

Ali H. Sayed is Professor of Electrical Engineering at UCLA, where he established and directs the Adaptive Systems Laboratory. He is a Fellow of the IEEE for his contributions to adaptive filtering and estimation algorithms. His research has attracted several recognitions including the 2003 Kuwait Prize, 2005 Terman Award, and several IEEE Best Paper Awards.

Features

• Includes solved practical computer projects that illustrate how the material developed in the textbook can be used to solve problems of practical relevance. Examples of topics addressed in the computer projects include: channel estimation, linear and
decision-feedback equalization, beamforming, tracking of fading channels, line and acoustic echo cancellation, active noise control, and OFDM receivers

- Contains numerous tables, figures, problems, computer simulations, bibliography, and appendices on both basic and advanced concepts.

- Contains several detailed computer projects with MATLAB solutions available to all readers (instructors and students and practitioners)

- A complete solutions manual for the problems is also available for instructors.
