**DESCRIPTION**

The second volume in a series, *Organic Synthesis: State of the Art 2005-2007* will provide you with a convenient, compact summary of the state of the art of organic synthesis. This reference guide will quickly lead you to the most important recent developments like how scientists can now prepare ketones by directly combining aldehydes with terminal alkenes. Inside, you will find detailed analysis of more than twenty total syntheses, including the Davies Synthesis of (-)-Colombiasin A and (-)-Elisapterosin B, the Overman Synthesis of (-)-Sarain A, and the Sorensen Synthesis of (-)-Guanacastepene E.

**ABOUT THE AUTHOR**

**DOUGLASS F. TABER**, PhD, is Professor of Chemistry at the University of Delaware, Newark, Delaware. Professor Taber has published more than 170 articles in the organic chemistry field, and has authored eight chapters and several books. His research interests include the stereoselective synthesis of natural products, new methods in synthetic organic chemistry, and computational organometallic chemistry in organic synthesis.
