DESCRIPTION

Glass-ceramic materials share many properties with both glass and more traditional crystalline ceramics. This new edition examines the various types of glass-ceramic materials, the methods of their development, and their countless applications. With expanded sections on biomaterials and highly bioactive products (i.e., Bioglass and related glass ceramics), as well as the newest mechanisms for the development of dental ceramics and theories on the development of nano-scaled glass-ceramics, here is a must-have guide for ceramic and materials engineers, managers, and designers in the ceramic and glass industry.

ABOUT THE AUTHOR

WOLFRAM HÖLAND, PhD, is the Head of the Department of Research and Development, Inorganic Chemistry Technical Fundamentals, at Ivoclar Vivadent AG, Liechtenstein. He is also a Lecturer in the Department of Inorganic Chemistry, Eidgenössische Technische Hochschule (ETH Zurich) in Switzerland. Dr. Höland is the recipient of several awards, including the Wöhler Prize of the German Chemical Society and the Turner Award of the International Commission on Glass.

GEORGE H. BEALL, PhD, received his PhD in geology from MIT in 1962 and was a Research Fellow in the Science and Technology Division of Corning Incorporated, Corning, New York. Until 1995, Dr. Beall was a Courtesy Professor in the
Department of Materials Science and Engineering at Cornell University, and has authored or coauthored approximately eighty technical papers and one book, and holds more than 100 U.S. patents.
