DESCRIPTION

Based on the authors' teaching and research at the Johns Hopkins Bloomberg School of Public Health and the Keck School of Medicine of the University of Southern California, the second edition of this landmark text offers a general framework for students, researchers, practitioners, and policymakers for learning about vulnerable populations. It contains in-depth data and information on major health and health care disparities by race or ethnicity, socioeconomic status, and health insurance coverage. It is thoroughly updated to include the latest data and trends and provides a detailed synthesis of recent and increasingly expansive programs and initiatives to remedy these disparities. To keep current with recent trends it incorporates the latest Healthy People 2020 objectives, includes new sections on real-world clinical examples, and discusses the impact of health care reform on vulnerable populations. The book's Web site includes instructor’s materials that may be downloaded.
