**DESCRIPTION**

This unique book provides an overview of all four technologies required for building e-commerce applications and demonstrates how they combine with each other to best effect.

* A single running example (an electronic retail application) demonstrates how the techniques work in practice

* Coverage of Java Database Connectivity (JDBC) and Java Server Pages (JSP)

* Pragmatic and practical approach with very little theory

* The companion Web Site provides all source code used in the book

* Find out about integration issues and discover which technology is best suited for your needs

**ABOUT THE AUTHOR**

ANDREAS EBERHART is a Research Associate at the International University in Germany. He teaches courses on databases, transaction processing, and distributed application development. Before joining the International University he worked as a software engineer in the industry.
STEFAN FISCHER is a professor for distributed systems at the Technical University of Braunschweig, Germany. He has authored and co-authored a number of books on application development in networks and distributed systems as well as on network security.
