This book is devoted to resonant energy conversion in power electronics. It is a practical, systematic guide to the analysis and design of various dc-dc resonant inverters, high-frequency rectifiers, and dc-dc resonant converters that are building blocks of many of today's high-frequency energy processors. Designed to function as both a superior senior-to-graduate level textbook for electrical engineering courses and a valuable professional reference for practicing engineers, it provides students and engineers with a solid grasp of existing high-frequency technology, while acquainting them with a number of easy-to-use tools for the analysis and design of resonant power circuits. Resonant power conversion technology is now a very hot area and in the center of the renewable energy and energy harvesting technologies.
papers, and 190 conference papers. Dr. Kazimierczuk is an IEEE Fellow and also an Associate Editor of the IEEE Transactions on Industrial Electronics and International Journal of Circuit Theory and Application.

Dariusz Czarkowski, PhD, is an Associate Professor in the Department of Electrical and Computer Engineering at the Polytechnic Institute of New York University. His research focuses on power electronics and power systems.

FEATURES

• Contains material class-tested by authors over many years at Wright State University.

• Solutions Manual available.

• Provides a comprehensive and timely coverage of state-of-the art resonant conversion technology.

• Details design procedures for a large variety of high-frequency dc-ac resonant inverters, rectifiers, and dc-dc resonant converters.

• Offers numerous analysis and design examples, schematics, summaries, end-of-chapter problems, review questions, and extensive bibliographies.
