DESCRIPTION

This book guides medicinal chemists in how to implement early ADMET testing in their workflow in order to improve both the speed and efficiency of their efforts. Although many pharmaceutical companies have dedicated groups directly interfacing with drug discovery, the scientific principles and strategies are practiced in a variety of different ways. This book answers the need to regularize the drug discovery interface; it defines and reviews the field of ADME for medicinal chemists. In addition, the scientific principles and the tools utilized by ADME scientists in a discovery setting, as applied to medicinal chemistry and structure modification to improve drug-like properties of drug candidates, are examined.

ABOUT THE AUTHOR

KATYA TSAIOUN, PhD, is Chief Scientific Officer of Cyprotex and, previously, president and founder Apredica, which was acquired by Cyprotex. Both companies specialize in the rapid preclinical in vitro assessment of the ADME-Tox (Absorption, Distribution, Metabolism, Elimination, and Toxicity) properties of small-molecule and peptide therapeutics.

STEVEN A. KATES, PhD is Vice President of Research and Development at Ischemix. He is a highly experienced chemist with over twenty years in R&D for both life science products and human therapeutics, and has advanced several compounds through drug development from early preclinical to early clinical development. He has more than 100 patents and publications, including one book.
