DESCRIPTION

The book highlights the current practices and future trends in structural characterization of impurities and degradants. It begins with an overview of mass spectrometry techniques as related to the analysis of impurities and degradants, followed by studies involving characterization of process related impurities (including potential genotoxic impurities), and excipient related impurities in formulated products. Both general practitioners in pharmaceutical research and specialists in analytical chemistry field will benefit from this book that will detail step-by-step approaches and new strategies to solve challenging problems related to pharmaceutical research.

ABOUT THE AUTHOR

BIREN德拉 N. PRAMANIK is a Distinguished Fellow at Merck Research Laboratories, where he directs spectroscopy programs covering mass spectrometry and NMR efforts. He was previously a distinguished fellow at Schering-Plough Research Institute. He received his PhD in organic chemistry under the late Professor Ajay K. Bose from Stevens Institute of Technology in 1977.

MIKE S. LEE is President of Milestone Development Services, a provider of consulting services specializing in pharmaceutical analysis and accelerated drug discovery and development strategies in Newtown, Pennsylvania. He previously directed program research at Bristol-Myers Squibb, Pharmaceutical Research Institute in New Brunswick, New Jersey.
GUODONG CHEN is Principal Scientist in Bioanalytical and Discovery Analytical Sciences at Bristol-Myers Squibb in Princeton, New Jersey. He heads a mass spectrometry group in support of drug discovery as well as development programs in small molecule pharmaceuticals and biologics. He received his PhD in analytical chemistry from Purdue University under the direction of Professor R. Graham Cooks.
