DESCRIPTION

Carbon dioxide has been implicated in the global climate change, and CO2 sequestration is a technology being explored to curb the anthropogenic emission of CO2 into the atmosphere. The injection of CO2 for enhanced oil recovery (EOR) has the dual benefit of sequestering the CO2 and extending the life of some older fields. This volume presents some of the latest information on these processes covering physical properties, operations, design, reservoir engineering, and geochemistry for AGI and the related technologies.

ABOUT THE AUTHOR

Ying (Alice) Wu is currently the President of Sphere Technology Connection Ltd. (STC) in Calgary, Canada. From 1983 to 1999, she was an assistant professor and researcher at Southwest Petroleum Institute (now Southwest Petroleum University, SWPU) in Sichuan, China. She received her MSc in petroleum engineering from SWPU and her BSc in petroleum engineering from Daqing Petroleum University in Heilongjiang, China.

John J. Carroll, PhD, PEng, is the Director, Geostorage Process Engineering for Gas Liquids Engineering in Calgary, Canada. Dr. Carroll holds bachelor and doctoral degrees in chemical engineering from the University of Alberta, Edmonton, Canada, and is a registered professional engineer in the provinces of Alberta and New Brunswick in Canada. His first book, Natural Gas Hydrates:
A Guide for Engineers, is now in its second edition, and he is the author or coauthor of fifty technical publications and about forty technical presentations.

Weiyoa Zhu is Professor at University of Science and Technology Beijing in China and Adjunct Professor in State Key Lab of Enhanced Oil and Gas Recovery at the Northeast Petroleum University. He has published more than 100 technical papers and authored six technical books. His research focus is on fluid mechanics in porous media, the theory and application of the multiphase flow for resource exploitation, new energy development, environmental fluid mechanics, and reservoir simulation.
