A Critical Resource with Information You Won't Find Anywhere Else.

Dentists of all specialties prescribe drugs for their patients, from pain medications to sedatives to antibiotics, and know all too well that making an evidenced-based decision on which drug to prescribe is more than just looking up a drug on the computer or PDA and requires more comprehensive consideration than the current drug reference books offer.

For example, should an antibiotic be prescribed for implant placement or for sinus augmentation procedures? If so, what antibiotic is recommended (backed up with references), when should it be started, and for how long? Which is the antibiotic of choice for an odontogenic infection and how do you know if that antibiotic is working?

Improve Your Decision Making with this Essential Guide.
