Monte Carlo Methods in Chemical Physics, Volume 105

David M. Ferguson (Editor), J. Ilja Siepmann (Editor), Donald G. Truhlar (Editor), Ilya Prigogine (Series Editor), Stuart A. Rice (Series Editor)

E-Book
September 2009
$432.99

Hardcover
November 1998
$540.75

O-Book
December 2006
Available on Wiley Online Library

DESCRIPTION

ABOUT THE AUTHOR

DAVID M. FERGUSON, PhD, is Associate Professor of Medicinal Chemistry at the University of Minnesota. He is a member of the graduate faculties in chemical physics and scientific computation. His research specialty is computer simulation of biophysical problems. J. ILJA SIEPMANN, PhD, is Assistant Professor of Chemistry and a member of the graduate faculties in chemical physics and chemical engineering and materials science at the University of Minnesota. His research specialties are computer simulation of complex fluids, statistical mechanics, and prediction of phase equilibria. DONALD G. TRUHLAR, PhD, is I.T. Distinguished Professor of Chemistry at the University of Minnesota, where he is also Director of the University of Minnesota Supercomputer Institute. He is a member of the graduate faculties in chemical physics and scientific computation. His research specialty is theoretical chemical dynamics.
