DESCRIPTION

The fastest way to straighten out the learning curve on specialized design projects

"The series is welcome . . . By providing recent buildings as examples, supported with technical information and charts of design criteria, these books attempt to bridge the gap between theory and practice."-Oculus

Building Type Basics books provide architects with the essentials they need to jump-start the design of a variety of specialized facilities. In each volume, leading national figures in the field address the key questions that shape the early phases of a project commission. The answers to these questions provide instant information in a convenient, easy-to-use format. The result is an excellent, hands-on reference that puts critical information at your fingertips. Building Type Basics for Research Laboratories provides the essential information needed to initiate designs for government, academic, and private research laboratories. Filled with project photographs, diagrams, floor plans, sections, and details, it combines in-depth coverage of the structural, mechanical, energy, cost, and safety issues that are unique to research laboratories with the nuts-and-bolts design guidelines that will start any project off on the right track and keep it there through completion.
ABOUT THE AUTHOR

DANIEL D. WATCH, AIA, is an architect and laboratory planner with the renowned architectural firm Perkins & Will (recipient of the American Institute of Architects' 1999 National Architecture Firm Award). He has personally coordinated the design of nearly twenty major research laboratory facilities.

STEPHEN A. KLIMENT, FAIA (Series Founder and Editor), is an architectural journalist and an adjunct professor at the City College of New York. He was chief editor of Architectural Record from 1990 to 1996.
