DESCRIPTION

The eagerly awaited 2nd edition of this classic handbook is a critical, thorough account of memory disorders relating to neurological processes and to developmental and acquired brain damage and presents comprehensive sections on theory, assessment, treatment and management of memory disorders.

Written by a truly international team of experts, this completely updated edition offers an authoritative review of the key areas of research and development in this field.

? Completely updated and expanded

? New sections and chapters reflect many of the biggest growth areas in the field in recent years, such as confabulation, false memory and the frontal lobes

? Written by an international team of experts

ABOUT THE AUTHOR

Alan Baddeley is Professor of Psychology at York University and one of the world's leading authorities on Human Memory. He is celebrated for devising the groundbreaking and highly influential working memory model with Graham Hitch in the early 1970s,
a model which still proves valuable today in recognising the functions of short-term memory. He was awarded a CBE for his contributions to the study of memory, is a Fellow of the Royal Society, of the British Academy and of the Academy of Medical Sciences. In 2012 he was the recipient of the BPS Research Board's Lifetime Achievement Award recognising his outstanding record of personal achievements and significant contributions to the advancement of psychological knowledge.
