In *Communities and Networks*, Katherine Giuffre takes the science of social network analysis and applies it to key issues of living in communities, especially in urban areas, exploring questions such as: How do communities shape our lives and identities? How do they foster either conformity or innovation? What holds communities together and what happens when they fragment or fall apart? How is community life changing in response to technological advances?

Refreshingly accessible and built on fascinating case examples, this unique book provides not only the theoretical grounding necessary to understand how and why the burgeoning area of social network analysis can be useful in studying communities, but also clear technical explanations of the tools of network analysis and how to gather and analyze real-world network data. Network analysis allows us to see community life in a new perspective, with sometimes surprising results and insights, and this book enables readers to gain a deeper understanding of social life and the relationships that build (and break) communities.

This engaging text will be an exciting new resource for upper-level undergraduate and beginning graduate students in a wide range of courses including social network analysis, community studies, urban studies, organizational studies, and quantitative methods.

---

### ABOUT THE AUTHOR

Katherine Giuffre is associate professor of sociology at Colorado College.
FEATURES

• An innovative guide to using social network analysis to study urban communities

• Provides clear technical explanations of the tools of network analysis, and how to gather and analyse real-world network data

• Shows readers how social network analysis illuminates the study of communities, and offers deeper understandings of urban and social life

• Refreshingly accessible and built on fascinating case examples
