DESCRIPTION

Understanding the reactivity of monomers is crucial in creating copolymers and determining the outcome of copolymerization. Covering the fundamental aspects of polymerization, *Synthesis and Applications of Copolymers* explores the reactivity of monomers and reaction conditions that ensure that the newly formed polymeric materials exhibit desired properties. Referencing a wide-range of disciplines, the book provides researchers, students, and scientists with the preparation of a diverse variety of copolymers and their recent developments, with a particular focus on copolymerization, crystallization, and techniques like nanoimprinting and micropatterning.

ABOUT THE AUTHOR

Anbanadam Parthiban is a Research Scientist at the Institute of Chemical and Engineering Sciences under the Agency for Science, Technology and Research (A*STAR), Singapore. After receiving his Ph.D. in Chemistry from the Indian Institute of Technology (IIT), Madras Dr. Parthiban worked in a corporate R&D Centre developing thickeners and additives for lubricants. He has 40 journal publications and 9 patents and is an active reviewer of manuscripts for major polymer journals. He also evaluates proposals for government funded research agencies.
