A comprehensive reference on external contributing factors in psychopathology

*Developmental Psychopathology* is a four-volume compendium of the most complete and current research on every aspect of the field. *Volume Three: Risk, Disorder, and Adaptation* explores the everyday effects and behaviors of those with behavioral, mental, or neurological disorders, and the disorder’s real-world impact on their well-being. Now in its third edition, this comprehensive reference has been fully updated to better reflect the current state of the field, and detail the latest findings in causation, intervention, contextual factors, and the risks associated with atypical development. Contributions from expert researchers and clinicians explore the effects of abuse and traumatic stress, memory development, emotion regulation, impulsivity, and more, with chapters specifically targeted toward autism, schizophrenia, narcissism, antisocial behavior, bipolar disorder, and borderline personality disorder.

Advances in developmental psychopathology have burgeoned since the 2006 publication of the second edition, and keeping up on the latest findings in multiple avenues of investigation can be burdensome to the busy professional. This series solves the problem by collecting the information into one place, with a logical organization designed for easy reference.

- Learn how childhood experiences contribute to psychopathology
- Explore the relationship between atypical development and substance abuse
- Consider the impact or absence of other developmental traits
- Understand the full risk potential of any behavioral or mental disorder
The complexity of a field as diverse as developmental psychopathology deepens with each emerging theory, especially with consideration of the multiple external factors that have major effects on a person's mental and emotional development. *Developmental Psychopathology Volume Three: Risk, Disorder, and Adaptation* compiles the latest information into a cohesive, broad-reaching reference with the most recent findings.

**ABOUT THE AUTHOR**

**Dante Cicchetti**, Ph.D., is McKnight Presidential Chair of Child Psychology in the Institute of Child Development and in the Department of Psychiatry, University of Minnesota. He also is Professor of Psychology at the University of Minnesota. From 1985 to 2005, he directed the Mt. Hope Family Center at the University of Rochester. His major research interests lie in the formulation of an integrative developmental theory that can account for both normal and abnormal forms of ontogenesis. His work has several foci: 1) developmental psychopathology; 2) the developmental consequences of child maltreatment; 3) neural plasticity and sensitive periods; 4) the impact of traumatic experiences upon brain development; 5) the biology and psychology of unipolar and bipolar depressive diseases; 6) the interrelationships among molecular genetic, neurobiological, socio-emotional, cognitive, linguistic and representational development in normal and pathological populations; and 7) the study of attachment relations and representational models of the self and its disorders across the life span. Cicchetti has published hundreds of articles, books, and journals that have had far-reaching impact on developmental theory as well as science, policy, and practice related to child maltreatment, depression, mental retardation, and numerous other domains of development.
