Developmental Psychopathology, Volume 4, Risk, Resilience, and Intervention, 3rd Edition

Dante Cicchetti (Editor)

Hardcover ISBN: 978-1-118-12093-4 February 2016 $260.00

DESCRIPTION

Examine the latest research merging nature and nurture in pathological development

*Developmental Psychopathology* is a four-volume compendium of the most complete and current research on every aspect of the field. *Volume Four: Genes and Environment* focuses on the interplay between nature and nurture throughout the life stages, and the ways in which a child's environment can influence his or her physical and mental health as an adult. The discussion explores relationships with family, friends, and the community; environmental factors like poverty, violence, and social support; the development of coping mechanisms, and more, including the impact of these factors on physical brain development. This new third edition has been fully updated to incorporate the latest advances, and to better reflect the increasingly multilevel and interdisciplinary nature of the field and the growing importance of translational research. The relevance of classification in a developmental context is also addressed, including DSM-5 criteria and definitions.

Advances in developmental psychopathology are occurring increasingly quickly as expanding theoretical and empirical work brings about dramatic gains in the multiple domains of child and adult development. This book brings you up to date on the latest developments surrounding genetics and environmental influence, including their intersection in experience-dependent brain development.

- Understand the impact of childhood adversity on adulthood health
- Gauge the effects of violence, poverty, interparental conflict, and more
- Learn how peer, family, and community relationships drive development
• Examine developments in prevention science and future research priorities

Developmental psychopathology is necessarily interdisciplinary, as development arises from a dynamic interplay between psychological, genetic, social, cognitive, emotional, and cultural factors. *Developmental Psychopathology Volume Four: Genes and Environment* brings this diverse research together to give you a cohesive picture of the state of knowledge in the field.

**ABOUT THE AUTHOR**

**Dante Cicchetti,** Ph.D., is McKnight Presidential Chair of Child Psychology in the Institute of Child Development and in the Department of Psychiatry, University of Minnesota. He also is Professor of Psychology at the University of Minnesota. From 1985 to 2005, he directed the Mt. Hope Family Center at the University of Rochester. His major research interests lie in the formulation of an integrative developmental theory that can account for both normal and abnormal forms of ontogenesis. His work has several foci: 1) developmental psychopathology; 2) the developmental consequences of child maltreatment; 3) neural plasticity and sensitive periods; 4) the impact of traumatic experiences upon brain development; 5) the biology and psychology of unipolar and bipolar depressive diseases; 6) the interrelationships among molecular genetic, neurobiological, socio-emotional, cognitive, linguistic and representational development in normal and pathological populations; and 7) the study of attachment relations and representational models of the self and its disorders across the life span. Cicchetti has published hundreds of articles, books, and journals that have had far-reaching impact on developmental theory as well as science, policy, and practice related to child maltreatment, depression, mental retardation, and numerous other domains of development.
