**DESCRIPTION**

A guide to state-of-the-art cancer immunotherapy in translational cancer research

A volume in the *Translational Oncology* series, *Immunotherapy in Translational Cancer Research* explores the recent developments in the role that immunotherapy plays in the treatment of a wide range of cancers. The editors present key concepts, illustrative examples, and suggest alternative strategies in order to achieve individualized targeted therapy. Comprehensive in scope, *Immunotherapy in Translational Cancer Research* reviews the relevant history, current state, and the future of burgeoning cancer-fighting therapies. The book also includes critical information on drug development, clinical trials, and governmental resources and regulatory issues.

Each chapter is created to feature: development of the immunotherapy; challenges that have been overcome in order to scale up and undertake clinical trials; and clinical experience and application of research. This authoritative volume is edited by a team of noted experts from MD Anderson Cancer Center, the world's foremost cancer research and care center and:

- Offers a comprehensive presentation of state-of-the-art cancer immunotherapy research that accelerates the pace of clinical cancer care
- Filled with the concepts, examples, and approaches for developing individualized therapy
- Explores the breath of treatments that reflect the complexity of the immune system itself
- Includes contributions from a panel international experts in the field of immunotherapy
Designed for physicians, medical students, scientists, pharmaceutical executives, public health and public policy government leaders and community oncologists, this essential resource offers a guide to the bidirectional interaction between laboratory and clinic immunotherapy cancer research.
