DESCRIPTION

*Cancer Stem Cells* covers a wide range of topics in cancer stem cell biology, including the functional characteristics of cancer stem cells and how they're generated, where they are localized, the means by which cancer stem cells can be targeted, and how cancer stem cells can be reprogrammed back to normal tissue stem cells. Each chapter begins with a brief historical note and concept summary, followed by a description of the latest basic or clinical advance associated with the topic.

*Cancer Stem Cells* builds systematically from coverage of the basic research stage to an advanced research level, from clinical relevance to therapeutic potential, and will be a valuable resource for professionals in the fields of cancer research and stem cell biology.

ABOUT THE AUTHOR

**Dr. V.K. Rajasekhar**, M.Sc., M.Phil., Ph.D., is a Senior Research Scientist at Memorial Sloan-Kettering Cancer Center, New York. His work with patient derived prostate cancer stem cell xenografts, a first study in renewable Biobanking of these clinically relevant cells, has garnered eclectic post-publication reviews. Dr. Rajasekhar has received competitive research awards from the Alexander von Humboldt Foundation, Germany, and the Robert A. Welch Foundation, Texas. He has conducted research at MD Anderson Cancer Center in Houston, University of California at Irvine, University of Freiburg in Germany, etc., and taught at the University of California, Irvine and the University of Medicine and Dentistry of New Jersey. Dr. Rajasekhar has served as a peer reviewer for...
several journals, including *Stem Cells, Proceedings of National Academy of Sciences USA, Journal of Molecular Biology, Journal of Cell Biology, Neoplasia*, etc.
