Integrative Organismal Biology synthesizes current understandings of the causes and consequences of individual variation at the physiological, behavioral and organismal levels. Emphasizing key topics such as phenotypic plasticity and flexibility, and summarizing emerging areas such as ecological immunology, oxidative stress biology and others, Integrative Organismal Biology pulls together information from diverse disciplines to provide a synthetic view of the role of the individual in evolution.

Beginning with the role of the individual in evolutionary and ecological processes, the book covers theory and mechanism from both classic and modern perspectives. Chapters explore concepts such as phenotypic plasticity, genetic and epigenetic variation, physiological and phenotypic variation, homeostasis, and gene and physiological regulatory networks. A concluding section interweaves these concepts through a series of case studies of life processes such as aging, reproduction, and immune defense.

Written and edited by leaders in the field, Integrative Organismal Biology will be an important advanced textbook for students and researchers across a variety of subdisciplines of integrative biology.

ABOUT THE AUTHOR

Lynn B. Martin is Assistant Professor in the Department of Integrative Biology at the University of South Florida. Dr. Martin is on the editorial boards for Functional Ecology and Proceedings of the Royal Society of London B, and serves as an ad hoc reviewer for numerous journals including American Naturalist, General and Comparative Endocrinology, Evolutionary Ecology, and Science.
Cameron K. Ghalambor is Associate Professor in the Department of Biology at Colorado State University. The author of numerous peer-reviewed publications, Dr. Ghalambor also provides reviews for a number of journals including *Evolution* and *Nature*, and has served as a grant reviewer for the National Science Foundation, Murdoch Trust, and Natural Environment Research Council, UK.

Art Woods is Associate Professor in the Division of Biological Sciences at the University of Montana, Missoula. Dr. Woods serves as a reviewer for numerous journals including *Journal of Experimental Biology*, *Physiological and Biochemical Zoology*, *Proceedings of the Royal Society of London B*, *Functional Ecology*, and *American Naturalist*. In 2009 Dr. Woods received one of the National Science Foundation's prestigious CAREER awards in support of his research on leaf microclimates and plant-insect interactions.
