Since its introduction to dentistry, cone beam computed tomography (CBCT) has undergone a rapid evolution and considerable integration into orthodontics. However, despite the increasing popularity of CBCT and progress in applying it to clinical orthodontics, the profession has lacked a cohesive, comprehensive and objective reference that provides clinicians with the background needed to utilize this technology optimally for treating their patients. *Cone Beam Computed Tomography in Orthodontics* provides timely, impartial, and state-of-the-art information on the indications and protocols for CBCT imaging in orthodontics, clinical insights gained from these images, and innovations driven by these insights. As such, it is the most current and authoritative textbook on CBCT in orthodontics. Additionally, two DVDs include more than 15 hours of video presentations on related subjects from the 39th Annual Moyers Symposium and 38th Annual International Conference on Craniofacial Research.

*Cone Beam Computed Tomography in Orthodontics* is organized to progress sequentially through specific topics so as to build the knowledgebase logically in this important and rapidly evolving field. Part I provides the foundational information on CBCT technology, including radiation exposure and risks, and future evolutions in computed tomography. Part II presents the Principles and Protocols for CBCT Imaging in Orthodontics, focusing on developing evidence-based criteria for CBCT imaging, the medico-legal implications of CBCT to the professional and the protocols and integration of this technology in orthodontic practice. Part III provides critical information on CBCT-based Diagnosis and Treatment Planning that includes how to interpret CBCT scans, identify incidental pathologies and the possible other uses of this technology. Part IV covers practical aspects of CBCT’s Clinical Applications and
Treatment Outcomes that encompasses a range of topics, including root morphology and position, treatment of impacted teeth, virtual surgical treatment planning and outcomes, and more.

**ABOUT THE AUTHOR**

Sunil Kapila, D.D.S., M.S., Ph.D., is Robert W. Browne Endowed Professor and Chair, Department of Orthodontics and Pediatric Dentistry, the University of Michigan School of Dentistry in Ann Arbor, Michigan. He also serves as the Graduate Orthodontics Program Director at the University of Michigan. Dr. Kapila is the director of the Moyers Symposium, a prestigious conference held at the University of Michigan, which each year focuses on a specific topic in orthodontics, dentofacial orthopedics and craniofacial biology.

---

**FEATURES**

- Presents case studies on clinical applications of cone beam computed tomography

- Contributors include leading radiology, orthodontics, oral surgery, and pathology experts from North America, South America, Europe, Asia and the Middle East

- More than 320 color photographs, radiographs, and illustrations

- Bonus feature! Two DVDs containing more than 15 hours of presentations from the 39th Annual Moyers Symposium and the 38th Annual International Conference on Craniofacial Research (Presymposium)
