DESCRIPTION

Botulinum Toxins: Cosmetic and Clinical Applications provides a comprehensive and in-depth review of the use of botulinum toxin for aesthetic procedures and medical applications as a stand-alone treatment and as part of combination therapy.

Now a mainstay of cosmetic dermatologic practice, the range of available toxins and their varied applications has grown considerably in recent years requiring the practitioner to carefully consider what approach best suits the needs of their patient. This new book, written by international expert authors, provides guidance to help you refine your technique, add new procedures to your practice, and provide optimal results.

• Benefits from a wealth of color images, procedural videos, and expert tips and tricks

• Takes a region oriented approach, providing guidance on treatment of the; glabella, forehead, periocular and perioral areas, and contouring of the lower face and lower leg and calf, and neck rejuvenation

• Contains a thorough review of non-cosmetic treatments such as correction of facial asymmetry, and treatment of axillary hyperhidrosis, plus palm, sole, and craniofacial hyperhidrosis
• Covers exciting new topics, such as future injectables, topical botulinum toxin, and facial contouring including treatment for benign masseter hypertrophy

• Discusses combination therapy of botulinum toxin with other non-surgical procedures such as hyaluronic acid (HA) or filler substances, light and laser sources, and other energy-based therapies

• Includes considerations for darker skin types
