DESCRIPTION

A comprehensive Java guide, with samples, exercises, case studies, and step-by-step instruction

Beginning Java Programming: The Object Oriented Approach is a straightforward resource for getting started with one of the world’s most enduringly popular programming languages. Based on classes taught by the authors, the book starts with the basics and gradually builds into more advanced concepts. The approach utilizes an integrated development environment that allows readers to immediately apply what they learn, and includes step-by-step instruction with plenty of sample programs. Each chapter contains exercises based on real-world business and educational scenarios, and the final chapter uses case studies to combine several concepts and put readers’ new skills to the test.

Beginning Java Programming: The Object Oriented Approach provides both the information and the tools beginners need to develop Java skills, from the general concepts of object-oriented programming. Learn to:

- Understand the Java language and object-oriented concept implementation
- Use Java to access and manipulate external data
- Make applications accessible to users with GUIs
- Streamline workflow with object-oriented patterns

The book is geared for those who want to use Java in an applied environment while learning at the same time. Useful as either a course text or a stand-alone self-study program, Beginning Java Programming is a thorough, comprehensive guide.
ABOUT THE AUTHOR

About the authors

Bart Baesens is a professor at KU Leuven and a lecturer at the University of Southampton, where he teaches various programming and database management courses.

Aimée Backiel is a doctoral researcher at KU Leuven. She teaches basic programming in Java to learners from diverse backgrounds.

Seppe vanden Broucke is a postdoctoral researcher at KU Leuven. He uses Java daily, giving him insight into useful applications for practitioners.
