Real world research is a common responsibility of professionals and practitioners in a wide range of both public and private settings. These include teachers, social workers and health service professionals, managers and specialists in business, architects, designers, criminologists and accountants among many others.

*Real World Research* provides a clear route-map of the various steps needed to carry out a piece of applied research to a high professional standard. It is accessible to those without a social science background while providing rigorous and fully up-to-date coverage of contemporary issues and debates. It brings together materials and approaches from different social science disciplines, seeing value in both quantitative and qualitative approaches, as well as their combination in mixed-method designs.

Colin Robson's bestselling textbook is essential reading for many higher education courses, at both undergraduate, taught postgraduate and doctoral level, as well as practitioners and others carrying out research as part of their job. A very extensive website, which is closely keyed in to the text, provides additional resources including copious examples of research and further discussion of research issues, links to other useful resources and selected journal articles, annotated lists of further reading and an extensive set of PowerPoint slides.
ABOUT THE AUTHOR

Colin Robson is a Professor in the Centres for Applied Childhood Studies and Evaluation Studies at Huddersfield University, and chief consultant to a major international project on the education of children with disabilities, difficulties and disadvantages, OECD, Paris. He is the author of the bestselling Real World Research.

NEW TO EDITION

• A new chapter - on desk-based research projects/literature reviews.

• Thoroughly updated and revised, with a focus on the qualitative and quantitative data analysis chapters.

• New discussions on the impact of research on policy change, especially in emerging and sensitive areas - with a focus on research ethics.

• More multi-disciplinary examples of research and its impact - incorporating research examples from forensic psychology, criminology, politics and social policy to further evidence the use, and transferability, of social research methods across disciplines

• Research methods training and future research - stressing the centrality of research methods in all walks of social life - from institutions, to UG and PG research, to careers

FEATURES

• Even-handed coverage of qualitative and quantitative approaches
• Furnishes students with the skills necessary in order to conduct research outside the laboratory, in 'real world' situations

• Draws examples from the field of applied psychology, applied social science, health studies, social work and education
