Recurrent Pregnancy Loss
Ole Bjarne Christiansen (Editor)

DESCRIPTION

Recurrent Pregnancy Loss

Edited by

Ole B Christiansen, MD, D.M.Sc., Rigshospitalet, Copenhagen and Aalborg University Hospital, Aalborg, Denmark

Recurrent Pregnancy Loss is a silent problem for many women

The spontaneous loss of a pregnancy in the first 22 weeks is often not recorded as the mother needed no medical or surgical treatment. Women who repeatedly suffer this tragedy can go unheard as a result. Gynecologists can feel unable to help.

But they can help. Research is showing how to identify women who suffer recurrent pregnancy loss and which treatments might prevent a further recurrence. Gynecologists are learning how to monitor subsequent pregnancies for the early signals of problems.

Recurrent Pregnancy Loss provides a practical approach to this hidden clinical challenge. The highly experienced, international author team explores:

• How to obtain a relevant history
• Which investigations to order
• The physiological reasons behind recurrent pregnancy loss
• The best approach to treatment
• How to monitor patients in subsequent pregnancies

Clinical in approach, practical in execution, with the patient at the centre, *Recurrent Pregnancy Loss* guides you as you support your patients.
