**DESCRIPTION**

Organized to enable students and synthetic chemists to understand and expand on aromatic reactions covered in foundation courses, the book offers a thorough and accessible mechanistic explanation of aromatic reactions involving arene compounds.

- Surveys methods used for preparing arene compounds and their transformations
- Connects reactivity and methodology with mechanism
- Helps readers apply aromatic reactions in a practical context by designing syntheses
- Provides essential information about techniques used to determine reaction mechanisms

---

**ABOUT THE AUTHOR**

Jacques Mortier, PhD, is Professor of Organic Chemistry at the University of Maine in Le Mans (France), where he teaches classes on Industrial Organic Chemistry and Reaction Mechanisms in Aromatic and Heteroaromatic Chemistry. Dr. Mortier started his career as a research chemist in the crop protection industry. At the University of Maine, his research is focused on various topics dealing with polar organometallics, directed aromatic metalation methodologies, and the study of reaction mechanisms. He
has extensive experience as a consultant for the chemical industry. In recognition of his research expertise, he was distinguished as a member of the University Institute of France (IUF).
