This second edition of the highly acclaimed *RF Power Amplifiers* has been thoroughly revised and expanded to reflect the latest challenges associated with power transmitters used in communications systems. With more rigorous treatment of many concepts, the new edition includes a unique combination of class-tested analysis and industry-proven design techniques.

Radio frequency (RF) power amplifiers are the fundamental building blocks used in a vast variety of wireless communication circuits, radio and TV broadcasting transmitters, radars, wireless energy transfer, and industrial processes. Through a combination of theory and practice, *RF Power Amplifiers, Second Edition* provides a solid understanding of the key concepts, the principle of operation, synthesis, analysis, and design of RF power amplifiers.

This extensive update boasts: up to date end of chapter summaries; review questions and problems; an expansion on key concepts; new examples related to real-world applications illustrating key concepts and brand new chapters covering ‘hot topics’ such as RF LC oscillators and dynamic power supplies.

Carefully edited for superior readability, this work remains an essential reference for research & development staff and design engineers. Senior level undergraduate and graduate electrical engineering students will also find it an invaluable resource with its practical examples & summaries, review questions and end of chapter problems.

Key features:

- A fully revised solutions manual is now hosted on a companion website alongside new simulations.
• Extended treatment of a broad range of topologies of RF power amplifiers.

• In-depth treatment of state-of-the-art of modern transmitters and a new chapter on oscillators.

• Includes problem-solving methodology, step-by-step derivations and closed-form design equations with illustrations.

---

ABOUT THE AUTHOR

Professor Marian K. Kazimierczuk, Wright State University, Dayton, Ohio, USA
Marian K. Kazimierczuk is a Professor of Electrical Engineering at Wright State University’s Department of Electrical Engineering. He has taught graduate courses in high-frequency electronics for 30 years and his research interests include: RF power amplifiers, power electronics, high-frequency magnetics and renewable energy sources. He has published 6 books, over 160 journal papers and over 200 conference papers. Marian K. Kazimierczuk also holds seven patents, is an IEEE Fellow and serves as an Associate Editor of the IEEE Transactions on Industrial Electronics, IEEE Transactions on Circuits and Systems and International Journal of Circuit Theory and Applications.
