An original reference applying wavelet analysis to power systems engineering

- Introduces a modern signal processing method called wavelet analysis, and more importantly, its applications to power system fault detection and protection
- Concentrates on its application to the power system, offering great potential for fault detection and protection
- Presents applications, examples, and case studies, together with the latest research findings
- Provides a combination of the author's tutorial notes from electrical engineering courses together with his own original research work, of interest to both industry and academia

ABOUT THE AUTHOR

Zhengyou He, Professor, Associate Dean, School of Electrical Engineering, Southwest Jiaotong University, Changdu, China

Professor He received his PhD in 2000 in 'Power System and its Automation' from Southwest Jiaotong University. From 1995-98 he worked as Chief Engineer at the Sichuan Electric Power Industry Bureau before taking his PhD in 1998. His research interests include signal processing and its application in power system, fault diagnosis and fault location for transmission and distribution
networks, protection and control of smart grid, rail transit electrification and automation. He has written three books in the Chinese language and has contributed to over 200 journals. He is a senior member of IEEE.
