Live-Line Operation and Maintenance of Power Distribution Networks
Tianyou Li, Qiujin Lin, Genghuang Chen

DESCRIPTION

Excellent reference outlining the technical basis and working principles of live-line working, with current application technology, tools and working methods

• Introduces live-line working technology for the operation and maintenance of medium and low voltage power distribution networks, covering both the methods and techniques of live-line working on distribution networks with O&M field practices and experiences

• Elaborates the technical basis and working principles of live-line working in detail, with current application technology, tools and working methods

• Combining theory and practice closely, it provides technical guidance and helpful references to technical personnel who are engaged in distribution operation management, as well as related academics and researchers

• Written by a team of authors with extensive experience in both industry and academic fields, providing first-hand testimony of the issues facing electricity distribution companies, and offering sound theoretical foundations and rich field experiences
