**DESCRIPTION**

The second edition of this concise and practical guide describes infections in geographical areas and provides information on disease risk, concomitant infections (such as co-prevalence of HIV and tuberculosis) and emerging bacterial, viral and parasitic infections in a given geographical area of the world.

- Geographic approach means that it's the only book to guide the health care worker towards a diagnosis based on the location of symptoms and travel history by encouraging the question *where have you been?*

- New content covering MERS, Ebola, Zika, and infections transmitted during air and maritime travel

- Covers the major infectious disease outbreaks framed in their geographic setting such as H7N9 *bird flu* influenza, H1N1, Ebola, and Zika

- Outstanding international editor team with vast experience on various international infectious disease and as journal editors and key leaders in infection surveillance
