Modeling of Photovoltaic Systems Using MATLAB: Simplified Green Codes
Tamer Khatib, Wilfried Elmenreich

Hardcover ISBN: 978-1-119-11810-7 July 2016 $124.75

DESCRIPTION

Provides simplified MATLAB codes for analysis of photovoltaic systems, describes the model of the whole photovoltaic power system, and shows readers how to build these models line by line.

This book presents simplified coded models for photovoltaic (PV) based systems using MATLAB to help readers understand the dynamic behavior of these systems. Through the use of MATLAB, the reader has the ability to modify system configuration, parameters and optimization criteria. Topics covered include energy sources, storage, and power electronic devices. This book contains six chapters that cover systems’ components from the solar source to the end-user. Chapter 1 discusses modelling of the solar source, and Chapter 2 discusses modelling of the photovoltaic source. Chapter 3 focuses on modeling of PV systems’ power electronic features and auxiliary power sources. Modeling of PV systems’ energy flow is examined in Chapter 4, while Chapter 5 discusses PV systems in electrical power systems. Chapter 6 presents an application of PV system models in systems’ size optimization. Common control methodologies applied to these systems are also modeled.

• Covers the basic models of the whole photovoltaic power system, enabling the reader modify the models to provide different sizing and control methodologies
• Examines auxiliary components to photovoltaic systems, including wind turbines, diesel generators, and pumps
• Contains examples, drills and codes
Modeling of Photovoltaic Systems Using MATLAB: Simplified Green Codes is a reference for researchers, students, and engineers who work in the field of renewable energy, and specifically in photovoltaic systems.

ABOUT THE AUTHOR

Tamer Khatib is an assistant professor in the Energy Engineering and Environment Department at An-Najah National University, Nablus, Palestine. He received his Ph.D. from National University of Malaysia, Malaysia. Khatib is a Senior Member of IEEE, a member of IEEE Power and Energy Society, and a member of The International Solar Energy Society.

Wilfried Elmenreich is a professor of Smart Grids at the Alpen-Adria-Universität in Klagenfurt, Austria. He received his Ph.D. from Vienna University of Technology, Austria. His research projects also affiliate him with the Lakeside Labs research cluster in Klagenfurt. Elmenreich is a Senior Member of IEEE and counselor of Klagenfurt's IEEE student branch.
