Sample Preparation in LC-MS Bioanalysis
Wenkui Li (Editor), Wenyong Jian (Editor), Yunlin Fu (Editor)

E-Book 978-1-119-27432-2 February 2019 $140.99
Hardcover 978-1-119-27429-2 March 2019 $175.00
O-Book 978-1-119-27431-5 March 2019 Available on Wiley Online Library

DESCRIPTION

Revised and Expanded Handbook Provides Comprehensive Introduction and Complete Instruction for Sample Preparation in Vital Category of Bioanalysis

Following in the footsteps of the previously published Handbook of LC-MS Bioanalysis, this book is a thorough and timely guide to all important sample preparation techniques used for quantitative Liquid Chromatography–Mass Spectrometry (LC-MS) bioanalysis of small and large molecules. LC-MS bioanalysis is a key element of pharmaceutical research and development, post-approval therapeutic drug monitoring, and many other studies used in human healthcare.

While advances are continually being made in key aspects of LC-MS bioanalysis such as sensitivity and throughput, the value of research/study mentioned above is still heavily dependent on the availability of high-quality data, for which sample preparation plays the critical role. Thus, this text provides researchers in industry, academia, and regulatory agencies with detailed sample preparation techniques and step-by-step protocols on proper extraction of various analyte(s) of interest from biological samples for LC-MS quantification, in accordance with current health authority regulations and industry best practices. The three sections of the book with a total of 26 chapters cover topics that include:

• Current basic sample preparation techniques (e.g., protein precipitation, liquid-liquid extraction, solid-phase extraction, salting-out assisted liquid-liquid extraction, ultracentrifugation and ultrafiltration, microsampling, sample extraction via electromembranes)

• Sample preparation techniques for uncommon biological matrices (e.g., tissues, hair, skin, nails, bones, mononuclear cells, cerebrospinal fluid, aqueous humor)
• Crucial aspects of LC-MS bioanalytical method development (e.g., pre-analytical considerations, derivation strategies, stability, non-specific binding) in addition to sample preparation techniques for challenging molecules (e.g., lipids, peptides, proteins, oligonucleotides, antibody-drug conjugates)

*Sample Preparation in LC-MS Bioanalysis* will prove a practical and highly valuable addition to the reference shelves of scientists and related professionals in a variety of fields, including pharmaceutical and biomedical research, mass spectrometry, and analytical chemistry, as well as practitioners in clinical pharmacology, toxicology, and therapeutic drug monitoring.

**ABOUT THE AUTHOR**

**WENKUI LI** is a Senior Fellow at the Novartis Institutes for BioMedical Research Pharmacokinetic Sciences. He serves on the Editorial Board of Biomedical Chromatography.

**WENYING JIAN** is a Senior Principal Scientist in Janssen Research and Development at the Johnson & Johnson Company. She serves on the Editorial Board of *Journal of Pharmacological and Toxicological Methods*.

**YUNLIN FU** is an Investigator at the Novartis Institutes for BioMedical Research Pharmacokinetic Sciences.
