DESCRIPTION

The Student Study Guide to accompany **Physics 11E** contains chapter summaries, and quick references to important equations and key chapter terms, with definitions provided.

ABOUT THE AUTHOR

David Young received his Ph.D. in experimental condensed matter physics from Florida State University in 1998. He then held a post-doc position in the Department of Chemistry and the Princeton Materials Institute at Princeton University before joining the faculty in the Department of Physics and Astronomy at Louisiana State University in 2000. His research focuses on the synthesis and characterization of high-quality single crystals of novel electronic and magnetic materials. He is the coauthor of almost 200 research publications that have appeared in peer-reviewed journals. Professor Young has received multiple awards for outstanding teaching of undergraduates.

Shane Stadler received his Ph.D. in experimental condensed matter physics from Tulane University in 1998. He went on to accept a National Research Council Postdoctoral Fellowship with the Naval Research Laboratory where he researched artificially structured magnetic materials. He then joined the faculty in the Department of Physics at Southern Illinois University before joining the faculty of the Department of Physics and Astronomy at Louisiana State University in 2008.

NEW TO EDITION

- *ORION Adaptive Practice*: Every student has a different starting point, and adaptive practice provides endless opportunities for practice to effectively prepare for class or quizzes and exams. Active retrieval of information with practice questions is proven to improve retention of information better than re-reading or reviewing the material, and students who use adaptive practice to prepare for exams do significantly better than those who do not. Students begin with a quick, section-level diagnostic to determine their initial level of understanding, and they can use the dashboard and quick reports to see what topics they know and don't know. This new course edition includes more feedback to ORION questions.
- *Lecture Videos*: 259 short section lecture video animations introduce each online course section by explaining the basic concepts and learning objectives. Most also include embedded questions for student engagement. Faculty will find these videos and questions ideal for pre-lecture assignment material for those who are flipping the classroom.
- *Group Problems*: Group problems added to each section are useful for in-class group activities.
- *Biological Application Examples*: Included "The Physics of ..." bio-inspired examples are similar to what premed students will encounter in the "Chemical and Physical Foundations of Biological Systems" passages section of the MCAT.

FEATURES

- *Lecture Videos*: 259 short section lecture video animations present all concepts and learning objectives throughout each section in the course.
- *Chalkboard Videos*: Short videos demonstrate practical problem-solving strategies step-by-step.
- *Math Help Videos*
- *Physics Demonstration Videos with Assessment Questions*
- *Physics Concept Simulations*: 1 to 7 videos are included per course section with related assessment questions.
- *Problem-Solving Help Videos*

- *MCAT Practice Questions*: Updated for the new MCAT exam style. 1 Practice Test per course section.
