DESCRIPTION

An essential guide to biomolecular and bioanalytical techniques and their applications

*Biomolecular and Bioanalytical Techniques* offers an introduction to, and a basic understanding of, a wide range of biophysical techniques. The text takes an interdisciplinary approach with contributions from a panel of distinguished experts. With a focus on research, the text comprehensively covers a broad selection of topics drawn from contemporary research in the fields of chemistry and biology. Each of the internationally reputed authors has contributed a single chapter on a specific technique. The chapters cover the specific technique’s background, theory, principles, technique, methodology, protocol and applications.

The text explores the use of a variety of analytical tools to characterise biological samples. The contributors explain how to identify and quantify biochemically important molecules, including small molecules as well as biological macromolecules such as enzymes, antibodies, proteins, peptides and nucleic acids. This book is filled with essential knowledge and explores the skills needed to carry out the research and development roles in academic and industrial laboratories.

- A technique-focused book that bridges the gap between an introductory text and a book on advanced research methods
- Provides the necessary background and skills needed to advance the research methods
• Features a structured approach within each chapter

• Demonstrates an interdisciplinary approach that serves to develop independent thinking

Written for students in chemistry, biological, medical, pharmaceutical, forensic and biophysical sciences, *Biomolecular and Bioanalytical Techniques* is an in-depth review of the most current biomolecular and bioanalytical techniques in the field.

---

**ABOUT THE AUTHOR**

**Editor:**

Dr Vasudevan Ramesh, retired from the Faculty of the School of Chemistry at the University of Manchester, Manchester, UK, after 18 years of distinguished service. He taught Physical Chemistry at all degree levels and pursued an active research programme in Biomolecular NMR spectroscopy. He was a Leverhulme Research Fellow at the University of Leicester and a Visiting Lecturer and Annual Award winner at the Peking University, Beijing, China.
