Microwave and Millimeter Wave Circuits and Systems: Emerging Design, Technologies and Applications
Apostolos Georgiadis, Hendrik Rogier, Luca Roselli, Paolo Arcioni

E-Book 978-1-118-40635-9 September 2012 $133.00
Hardcover 978-1-119-94494-2 November 2012 $166.25
O-Book 978-1-118-40586-4 September 2012 Available on Wiley Online Library

DESCRIPTION

Microwave and Millimeter Wave Circuits and Systems: Emerging Design, Technologies and Applications provides a wide spectrum of current trends in the design of microwave and millimeter circuits and systems. In addition, the book identifies the state-of-the art challenges in microwave and millimeter wave circuits systems design such as behavioral modeling of circuit components, software radio and digitally enhanced front-ends, new and promising technologies such as substrate-integrated-waveguide (SIW) and wearable electronic systems, and emerging applications such as tracking of moving targets using ultra-wideband radar, and new generation satellite navigation systems. Each chapter treats a selected problem and challenge within the field of Microwave and Millimeter wave circuits, and contains case studies and examples where appropriate.

Key Features:

- Discusses modeling and design strategies for new appealing applications in the domain of microwave and millimeter wave circuits and systems
- Written by experts active in the Microwave and Millimeter Wave frequency range (industry and academia)
- Addresses modeling/design/applications both from the circuit as from the system perspective
- Covers the latest innovations in the respective fields
• Each chapter treats a selected problem and challenge within the field of Microwave and Millimeter wave circuits, and contains case studies and examples where appropriate

This book serves as an excellent reference for engineers, researchers, research project managers and engineers working in R&D, professors, and post-graduates studying related courses. It will also be of interest to professionals working in product development and PhD students.

----------------------------------

### ABOUT THE AUTHOR

**Dr. Apostolos Geogiadis, CTTC, Spain**

Apostolos Geogiadis received his PhD in electrical engineering from University of Massachusetts, USA. He worked as a systems engineer involved with CMOS transceivers for WiFi applications before returning to academia. His current research interests include active antennas and radio frequency identification technology and energy harvesting.

**Professor Hendrik Rogier, Ghent University, Belgium**

Hendrik Rogier is a Senior Member of the IEEE. His research interests include the analysis of electromagnetic waveguides, signal integrity (SI) problems and smart antenna systems for wireless networks.

**Professor Luca Roselli, University of Perugia, Italy**

Luca Roselli is Director of the Science & Technology Committee of the research center ‘Pisciello’ for the development of automotive and communication technologies. His scientific interests include the design of high-frequency electronic circuits, systems and RFID sensors.

**Professor Paolo Arcioni, University of Pavia, Italy**

Paolo Arcioni is a reviewer for the *IEEE Transactions on Microwave Theory and Techniques*. He is a Senior Member of the IEEE, a member of the European Microwave Association, and of the Societa Italiana di Elettromagnetismo.
