In this new and expanding area, Tony Lancaster’s text is the first comprehensive introduction to the Bayesian way of doing applied economics.

- Uses clear explanations and practical illustrations and problems to present innovative, computer-intensive ways for applied economists to use the Bayesian method;

- Emphasizes computation and the study of probability distributions by computer sampling;

- Covers all the standard econometric models, including linear and non-linear regression using cross-sectional, time series, and panel data;

- Details causal inference and inference about structural econometric models;

- Includes numerical and graphical examples in each chapter, demonstrating their solutions using the S programming language and Bugs software.
• Supported by online supplements, including Data Sets and Solutions to Problems, at www.blackwellpublishing.com/lancaster
