Fully revised and updated to include new topical study areas, the second edition of the successful text the *Ecology of Insects* provides a balanced treatment of the theory and practice of pure and applied insect ecology.

- Includes new topical areas of insect ecology and provides greater coverage of physiological, genetic, molecular, and ecosystem aspects of insect ecology
- Concepts include the foundations of evolutionary ecology and population dynamics in ecosystem science as they are applied to topics such as climate change, conservation and biodiversity, epidemiology and pest management
- Fully updated and revised throughout, this new edition refers to primary literature and real world examples.

ABOUT THE AUTHOR

Martin Speight is Reader in Zoology and Head of the Tropical Ecology & Entomology Research Group at the Department of Zoology, University of Oxford. His research interests range from rainforest and plantation entomology, biodiversity and conservation, to coral reef and mangrove ecology and management. Martin is also a Tutorial Fellow in Biological Sciences at St Anne's College, Oxford.

Mark Hunter is Professor of Ecology and Evolutionary Biology and Professor of Natural Resources and Environment at the University of Michigan. He studies interactions between insects and plants and is interested in linking population dynamics to ecosystem processes.

Allan Watt is Deputy Science Director of the Biodiversity Programme at the Centre for Ecology and Hydrology, Edinburgh, UK. His research interests include the conservation of biodiversity and the management of forest pests.

FEATURES

- Provides a balanced treatment of the theory and practice of pure and applied insect ecology and its crucial importance to the planet
- Includes new topical areas of insect ecology and provides greater coverage of physiological, genetic, molecular, and ecosystem aspects of insect ecology
- Concepts include the foundations of evolutionary ecology and population dynamics in ecosystem science as they are applied to topics such as climate change, conservation and biodiversity, epidemiology and pest management
- Fully updated and revised throughout, this new edition refers to primary literature and real world examples
