DESCRIPTION

Fish have the same stress response and powers of nociception as mammals. Their behavioural responses to a variety of situations suggest a considerable ability for higher level neural processing – a level of consciousness equivalent perhaps to that attributed to mammals.

Each chapter of this book has been written by specialists in their field. The subject matter is wide ranging and covers in detail concepts of animal welfare in addition to more specific aspects of fish welfare. Philosophical concepts of welfare are discussed along with more practical areas of fish welfare encompassing all husbandry and management activities that have a potential to affect the welfare of the fish in our care.

This book is an essential purchase for fish veterinarians, fish farmers, fish biologists and those involved in the aquaculture industry and its regulation.

ABOUT THE AUTHOR

Edward Branson MRCVS, Veterinary Surgeon, RCVS Specialist in Fish Health and Production, Monmouthshire, UK

Edward Branson died suddenly before this book was finished and it is a great sadness to his friends and colleagues that he did not see the completion of a project that was so dear to his heart. Edward was a very active member of the Fish Veterinary Society and
it was always his wish that the Society should address all aspects of fish welfare. It was Edward’s ambition that the Society hold a wide-ranging workshop on current issues of Fish Welfare and, during his term of office as President, he saw this wish fulfilled. This book is a direct result of that workshop.
