### DESCRIPTION

This book brings together a wealth of scientific findings and ecological knowledge to survey what we have learned about the “Wet Tropics” rainforests of North Queensland, Australia. This interdisciplinary text is the first book to provide such a holistic view of any tropical forest environment, including the social and economic dimensions.

- The most thorough assessment of a tropical forest landscape to date
- Explores significant scientific breakthroughs in areas including conservation genetics, vegetation modeling, agroforestry and revegetation techniques, biodiversity assessment and modeling, impacts of climate change, and the integration of science in natural resource management
- Research achieved, in part, due to the Cooperative Research Centre for Tropical Rainforest Ecology and Management (the Rainforest CRC)
- Written by a number of distinguished international experts
ABOUT THE AUTHOR

**Nigel Stork** is Head of School of Resource Management and Geography and Head of the Burnley Campus at the University of Melbourne, Australia. Formerly the CEO of the Cooperative Research Centre for Tropical Rainforest Ecology and Management and Founder of the Australian Canopy Crane, he has studied tropical forest ecology and insect diversity in many tropical regions of the world with particular interest in the magnitude and decline of global biodiversity.

**Stephen Turton** is Professor and Executive Director of the Australian Tropical Forest Institute at Cook University in Cairns, Australia. Previously, he was Director of Research for the Rainforest Cooperative Research Centre. His research and teaching interests include tropical climatology, rainforest ecology, urban ecology, recreation ecology and natural resource management.

FEATURES

- The most thorough assessment of a tropical forest landscape to date

- Explores significant scientific breakthroughs in areas including conservation genetics, vegetation modeling, agroforestry and revegetation techniques, biodiversity assessment and modeling, impacts of climate change, and the integration of science in natural resource management

- Research achieved, in part, due to the Cooperative Research Centre for Tropical Rainforest Ecology and Management (the Rainforest CRC)

- Written by a number of distinguished international experts

- Contains chapter summaries and section commentaries
