**DESCRIPTION**

**By the time you’ve read this book, you’ll be ready to design your own research project**

Not everyone in clinical research is a scientific investigator. In fact, a large proportion of health professionals undertaking a research project are working in clinical care, as junior doctors, nurses or allied health professionals. For them a book that begins with the basics of study design and takes them through all the stages to data collection, analysis, and submission for publication is vital. *Getting Started in Health Research* is the answer. It provides fundamental information on:

- Framing the research question
- Performing the literature search
- Choosing the study design
- Collecting data
- Getting funding
- Recruiting participants
- Writing your paper

Lively case studies provide a continuous narrative, addressing the pitfalls and problems that can occur.
Calling upon their vast experience of teaching health research methodology, these authors have turned a seemingly daunting task into a challenging and enjoyable prospect.

Reviews of *Understanding Clinical Papers*

"...an excellent basis for all who intend to write scientific texts as well as those reading, evaluating, and trying to understand the results..."

*Clinical Chemistry, May 2007*

"What makes this book unique is that each point presented is illustrated with excerpts from actual papers, often three or four per chapter...this is a very effective teaching device."

*Journal of the American Medical Association, December 26, 2006*

"What strikes the reader ... straight away is clarity ... promises to become a recommended text for undergraduate and postgraduate courses."

*Journal of Tropical Pediatrics, September 2006*

"This book should be an essential addition to the personal libraries of all health care workers . . . "

*Oncology, 2002*
