This highly important book introduces the realm of organ donation, providing an overview of the current situation, highlighting the challenges, summarizing past research, and providing guidance for future research.

- The first book to bridge the gap between applied research and the social and behavioral issues surrounding organ donation
- An impressive collection of contributors from a range of both practitioners and scientists actively working in the field
- Provides a concrete example of how evidence-based research and theory can be applied with real-world value
- Explores future directions of organ donation and research including community-based health interventions, ethical considerations, and advancing donor registration
- The latest publication in the prestigious Claremont Applied Social Psychology Series

**ABOUT THE AUTHOR**

Jason T. Siegel is part of the Research Faculty at Claremont Graduate University’s School of Behavioral and Organizational Sciences. Dr. Siegel, Co-director of the Institute of Health Psychology and Prevention Science, has been researching organ-donation-related behavior for nearly a decade.
Eusebio M. Alvaro is a Research Faculty member at Claremont Graduate University’s School of Behavioral and Organizational Science where he is Co-Director of the Institute of Health Psychology and Prevention Science. He is a behavioral scientist conducting research on overcoming resistance to health behavior change.
