DESCRIPTION

Catheter Ablation of Atrial Fibrillation

Edited by

Etienne Aliot, MD, FESC, FACC, FHRS Chief of Cardiology, Hôpital Central, University of Nancy, France
Michel Haïssaguerre, MD Chief of Electrophysiology, Hôpital Cardiologique du Haut-Lévêque, France
Warren M. Jackman, MD Chief of Electrophysiology, University of Oklahoma Health Science Center, USA

In this text, internationally recognized authors explore and explain the advances in basic and clinical electrophysiology that have had the greatest impact on catheter ablation of atrial fibrillation (AF).

Designed to assist in patient care, stimulate research projects, and continue the remarkable advances in catheter ablation of AF, the book covers:

- the fundamental concepts of AF, origin of signals, computer simulation, and updated reviews of ablation tools
• the present practical approaches to the ablation of specific targets in the fibrillating atria, including pulmonary veins, atrial neural network, fragmented electrograms, and linear lesions, as well as the strategies in paroxysmal or chronic AF or facing left atrial tachycardias

• the special challenge of heart failure patients, the impact of ablation on mortality, atrial mechanical function, and lessons from surgical AF ablation

Richly illustrated by numerous high-quality images, Catheter Ablation of Atrial Fibrillation will help every member of the patient care team.

🎉 ABOUT THE AUTHOR

Cardiac Arrhythmia Research Inst.
Oklahoma City, OK, USA
An up-to-date guide to catheter ablation of atrial fibrillation

• Written by experienced authors, many of whom are the leading experts in the field

• Richly illustrated with detailed information necessary for appropriate clinical practise

• A collective text, ideal for electrophysiologists, allied health care professionals, and industry personnel
