The concept of 'person-centredness' has become established in approaches to the delivery of healthcare, particularly with nursing, and is embedded in many international healthcare policy frameworks and strategic plans. This book explores person-centred nursing using a framework that has been derived from research and practice.

*Person-centred Nursing* is a theoretically rigorous and practically applied text that aims to increase nurses’ understanding of the principles and practices of person-centred nursing in a multiprofessional context. It advances new understandings of person-centred nursing concepts and theories through the presentation of an inductively derived and tested framework for person-centred nursing. In addition it explores a variety of strategies for developing person-centred nursing and presents case examples of the concept in action.

This is a practical resource for all nurses who want to develop person-centred ways of working.

**ABOUT THE AUTHOR**
